ABBREVIATIONS**Oil and Natural Gas Liquids**

Bbl	Barrel
Bbls	Barrels
Bopd	barrels of oil per day
Mbbls	thousand barrels
Bbls/d	barrels per day
NGLs	natural gas liquids

Natural Gas

Mcf	thousand cubic feet
MMcf	million cubic feet
Mcf/d	thousand cubic feet per day
MM	million
MMbtu	million British Thermal Units
Mcfe	thousand feet of gas equivalent

Other

API	American Petroleum Institute
°API	an indication of the specific gravity of oil measured on the API gravity scale.
BOE	barrel of oil equivalent of natural gas and oil on the basis of 1 BOE for 6 Mcf of natural gas (this conversion factor is an industry accepted norm and is not based on either energy content or current prices)
BOE/d	barrel of oil equivalent per day
mD	millidarcy
M	metres
m ³	cubic metres
Km	kilometres
km ²	square kilometres
MBOE	1,000 barrels of oil equivalent
\$M	thousands of dollars

Disclosure provided herein in respect of BOEs may be misleading, particularly if used in isolation. A BOE conversion ratio of 6 Mcf: 1 Bbl is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. Given that the value ratio based on the current price of oil as compared to natural gas is significantly different from the energy equivalency of 6:1, utilizing a conversion on a 6:1 basis may be misleading as an indication of value.

Where any disclosure of reserves data is made in this Annual Information Form that does not reflect all reserves of Bengal, the reader should note that the estimates of reserves and future net revenue for individual properties or groups of properties may not reflect the same confidence level as estimates of reserves and future net revenue for all properties, due to the effects of aggregation.

CONVERSIONS

To Convert From	To	Multiply By
Mcf	Cubic metres	28.174
Cubic metres	Cubic feet	35.494

CERTAIN DEFINITIONS

In this Annual Information Form, the following words and phrases have the following meanings, unless the context otherwise requires:

"**ABCA**" means the *Business Corporations Act*, R.S.A. 2000, c. B-9, as amended, including the regulations promulgated thereunder.

"**Amendment**" means the March 5, 2018 amendment to the Credit Facility. See "*General Development of the Business - Fiscal Year Ended March 31, 2019 - Credit Facility*".

"**ATP**" means Authority to Prospect.

"**Bengal**" or the "**Corporation**" means Bengal Energy Ltd.

"**Bengal Australia**" means Bengal Energy (Australia) Pty Ltd., a wholly-owned subsidiary of Bengal incorporated in Australia.

"**Bengal Shares**" or "**Common Shares**" means the common shares in the capital of Bengal.

"**COGE Handbook**" means the Canadian Oil and Gas Evaluation Handbook maintained by the Society of Petroleum Evaluation Engineers (Calgary Chapter), as amended from time to time.

"**Credit Facility**" means the secured credit facility with Westpac. See "*General Development of the Business - Fiscal Year Ended March 31, 2019 - Credit Facility*", "*General Development of the Business - Fiscal Year Ended March 31, 2020 - Credit Facility*", and "*General Development of the Business - Fiscal Year Ended March 31, 2021 - Credit Facility*".

"**EPT**" means Extended Production Test.

"**GLJ**" means GLJ Ltd.

"**GLJ Report**" means the report of GLJ dated June 15, 2021 evaluating the oil, natural gas liquids and natural gas reserves of the Corporation as at March 31, 2021.

"Gross" means:

- (A) in relation to the Corporation's interest in production and reserves, its "company gross reserves", which are the Corporation's working interest (operating and non-operating) share before deduction of royalties and without including any royalty interest of the Corporation;
- (B) in relation to wells, the total number of wells in which the Corporation has an interest; and
- (C) in relation to properties, the total area of properties in which the Corporation has an interest.

"LWP" means Later Work Program.

"Net" means:

- (A) in relation to the Corporation's interest in production and reserves, the Corporation's working interest (operating and non-operating) share after deduction of royalty obligations, plus the Corporation's royalty interests in production or reserves;
- (B) in relation to wells, the number of wells obtained by aggregating the Corporation's working interest in each of its gross wells; and
- (C) in relation to the Corporation's interest in a property, the total area in which the Corporation has an interest multiplied by the working interest owned by the Corporation.

"NI 51-101" means National Instrument 51-101 – Standards of Disclosure for Oil and Gas Activities.

"NI 51-102" means National Instrument 51-102 – Continuous Disclosure Obligations

"PL" means Production License.

"PCA" means Potential Commercial Area.

"PEL" means Petroleum Exploration License.

"PPL" means Petroleum Production License.

"Preferred Shares" means the preferred shares, issuable in series, in the capital of Bengal.

"RL" means Retention License.

"SEDAR" means the System for Electronic Document Analysis and Retrieval.

"TSX" means the Toronto Stock Exchange.

"Westpac" means Westpac Banking Corporation.

Certain other terms used herein but not defined herein are defined in NI 51-101 and, unless the context otherwise requires, shall have the same meanings herein as in NI 51-101.

Unless otherwise specified, information in this Annual Information Form is as at the end of the Corporation's most recently completed financial year, being March 31, 2021.

All dollar amounts herein are in Canadian dollars, unless otherwise stated.

FORWARD-LOOKING STATEMENTS

Certain information regarding Bengal set forth in this document contains forward-looking statements. The use of any of the words "plan", "expect", "project", "intend", "believe", "should", "anticipate", "estimate" or other similar words, or statements that certain events or conditions "may" or "will" occur are typically intended to identify forward-looking statements. Forward-looking statements are not based on historical facts, but rather on Bengal's internal projections, estimates or beliefs concerning, among other things, future growth, results of operations, production, future capital and other expenditures (including the amount, nature and sources of funding thereof), competitive advantages, plans for and results of drilling activity, environmental regulation and related matters, business prospects and opportunities. These statements are only predictions, not guarantees, and actual events or results may differ materially. In particular, forward-looking statements included in this document include, but are not limited to, statements with respect to: Bengal's continued pursuit of an integrated growth strategy and continued alliances with local partners and operators in Australia; production and performance characteristics of the Corporation's oil and natural gas properties; oil and natural gas production levels and reserve estimates; the quantity of oil and natural gas reserves and recovery rates; the extent and results of testing and completion operations with respect to current and future wells; planning and drilling, the timing of restarting the campaign and the impacts of the COVID-19 pandemic on the timing and delays of drilling; drilling plans and strategy including, without limitation the timing, location and targeted zones of current and future wells; the availability of certain pipeline connections into certain transportation systems; the planned recompletion and refurbishing of certain wells and pipelines; the planned pilot reservoir maintenance scheme and injection plans, the anticipated increase in production in offsetting wells, the expected enabling of future water flood expansion phases and the expected decrease water disposal fees as a result of the injection of produced formation water, and the timing and delays of such plans due to the COVID-19 pandemic; the estimated costs of reprocessing seismic and inversion work and the estimated costs of geological and geophysical investigation for the amended LWP; the expectations and status with respect to discussions with third parties interested in farming-in on certain Bengal properties; the continued integration of subsurface data from PLs to assist in the selection of drilling location and completion programs; the timing expectations for the conversion of proved undeveloped resources into developed resources; expectations regarding the Santos (as defined herein) farm-in well at the LegBar Location (as defined herein) and the expectation of such resulting in no cost to the Corporation; the Corporation's capital expenditure programs and the anticipated capital expenditures for the acquisition, exploration, development and production of future reserves; the prospectively of ATP 934 (as defined herein); potential issues in the design of completion programs due to high viscosity; the results of the AVO/Inversion workflow on ATP 934; timing of the EPT (as defined herein) of the Nubba-1 well and the implications of the EPT on whether certain wells justify commercialization; estimates of fair value with respect to outstanding financial contracts; the expectations surrounding upcoming lease relinquishments; estimated abandonment and reclamation costs and the timing thereof; supply and demand for oil and natural gas and commodity prices; expectations regarding the Corporation's ability to raise capital and continually add to reserves through acquisitions, exploration and development; treatment under government regulatory regimes and tax laws; expected royalties that will be payable; anticipated work programs and land tenure; the granting of formal permits, licences or authorities to prospect or extensions thereof; evaluations of future net production revenues based on forecast prices and costs; and the intention to add additional staff; and the time at which the Corporation expects it will begin paying current income tax. In addition, statements relating to "reserves" are by their nature forward-looking statements, as they involve the implied assessment, based on certain estimates and assumptions, that the reserves described can be profitably produced in the future.

The forward-looking statements contained herein are subject to numerous known and unknown risks and uncertainties that may cause actual results to vary, including but not limited to risks associated with: the impact of general economic conditions in Australia and globally; industry conditions including changes in laws and regulations, including the adoption of new environmental laws and regulations, and changes in how they are interpreted and enforced, in Australia and globally; the impact (and duration thereof) that the COVID-19 pandemic will have on: (i) the demand for crude oil and natural gas, (ii) the supply chain, including the Corporation's ability to obtain the equipment and services it requires, and (iii) the Corporation's ability to produce, transport and/or sell its crude oil and natural gas; the level of competition; lack of availability of qualified personnel; the results of exploration and development drilling and related activities differing from management's expectations; imprecision in reserve estimates; the production and growth potential of Bengal's assets; governmental regulation of the oil and natural gas industry; a failure to obtain required approvals of regulatory authorities in Australia and India; risks associated with negotiating with foreign

governments as well as country risk associated with conducting international activities; failure to settle native title issues where applicable; volatility in market prices for oil and natural gas; fluctuations in foreign exchange or interest rates; environmental risks; changes in income tax laws or changes in tax laws and incentive programs relating to the oil and natural gas industry; ability to access sufficient capital from internal and external sources; general risks and liabilities inherent in oil and natural gas operations; results of geological, geophysical and reservoir analysis and testing operations; risks associated with the marketing and transportation of oil and natural gas; inability to retain drilling rigs and other services necessary to the Corporation's business; incorrect assessment of the value of acquisitions and/or the failure to realize the anticipated benefits of acquisitions; delays resulting from Bengal's inability to obtain required regulatory approvals or other consents, waivers or extensions; imprecision of reserve estimates; and other factors, many of which are beyond the control of the Corporation. Readers are cautioned that the foregoing list of factors is not exhaustive. Additional information on these and other factors that could affect Bengal's operations and financial results are included in the section entitled "*Risk Factors*" in this Annual Information Form and in reports on file with Canadian securities regulatory authorities and may be accessed through SEDAR (www.sedar.com).

With respect to forward-looking statements contained in this Annual Information Form, Bengal has made assumptions regarding: the impact of increasing competition; the general stability of the economic and political environment in which Bengal operates; the impact of the COVID-19 pandemic; the timely receipt of any required regulatory approvals and extensions; the timely settlement of native title issues, where applicable; the timely execution of required contracts and agreements with appropriate government agencies; the ability of Bengal to obtain qualified staff, equipment and services in a timely and cost efficient manner; drilling results; the ability of the operator of the projects which Bengal has an interest in to operate the field in a safe, efficient and effective manner; the timing of EPTs; the timing and completion of frac programs and timing of production on such wells following completion of the frac programs; the timing and expectations surrounding upcoming lease relinquishments; the completion of seismic interpretation; the ability to replace and expand oil and natural gas reserves through acquisition, development and exploitation; the timing and costs of pipeline, storage and facility construction and expansion and the ability of Bengal to secure adequate product transportation; future oil and natural gas prices; currency, exchange and interest rates; the continuance of current laws and regulations; the regulatory framework regarding royalties, taxes and environmental matters in the jurisdictions in which Bengal operates; and the ability of Bengal to successfully market its oil and natural gas products. Although the forward-looking statements contained in this Annual Information Form are based upon assumptions which management believes to be reasonable, there can be no assurance that actual results will be consistent with these forward-looking statements, as such undue reliance should not be placed on forward-looking statements.

Management has included the above summary of assumptions and risks related to forward-looking statements provided in this Annual Information Form in order to provide shareholders with a more complete perspective on Bengal's current and future operations and such information may not be appropriate for other purposes. Bengal's actual results, performance or achievement could differ materially from those expressed in, or implied by, these forward-looking statements and, accordingly, no assurance can be given that any of the events anticipated by the forward-looking statements will transpire or occur, or if any of them do so, what benefits that Bengal will derive therefrom. These forward-looking statements are made as of the date of this Annual Information Form and Bengal disclaims any intent or obligation to update publicly any forward-looking statements, whether as a result of new information, future events or results or otherwise, other than as required by applicable securities laws.

CAUTIONARY STATEMENTS REGARDING WELL TEST RESULTS

Any references in this Annual Information Form to Drill stem test results or similar production test rates are useful in confirming the presence of hydrocarbons. However, such rates are not determinative of the rates at which such wells will commence production and decline thereafter and are not indicative of long term performance or ultimate recovery. Readers are cautioned not to place reliance on such rates. A pressure transient analysis or well-test interpretation has not been carried out in respect of all wells. Accordingly, the Corporation cautions that the test results are historical and not indicative of long-term performance or ultimate recovery.

ANALOGOUS INFORMATION

Certain information in this document may constitute "analogous information" as defined in NI 51-101, including, but not limited to, information relating to the areas in geographical proximity to prospective exploratory lands held or to be held by Bengal. Management of Bengal believes the information is relevant as it helps to define the lands characteristics in which Bengal may hold an interest. Bengal is unable to confirm that the analogous information was prepared by a qualified

reserves evaluator or auditor. Such information is not an estimate of the reserves or resources attributable to lands held or to be held by Bengal and there is no certainty that the reserves data and economics information for the lands held or to be held by Bengal will be similar to the information presented herein.

BACKGROUND AND CORPORATE STRUCTURE

Name, Address and Incorporation

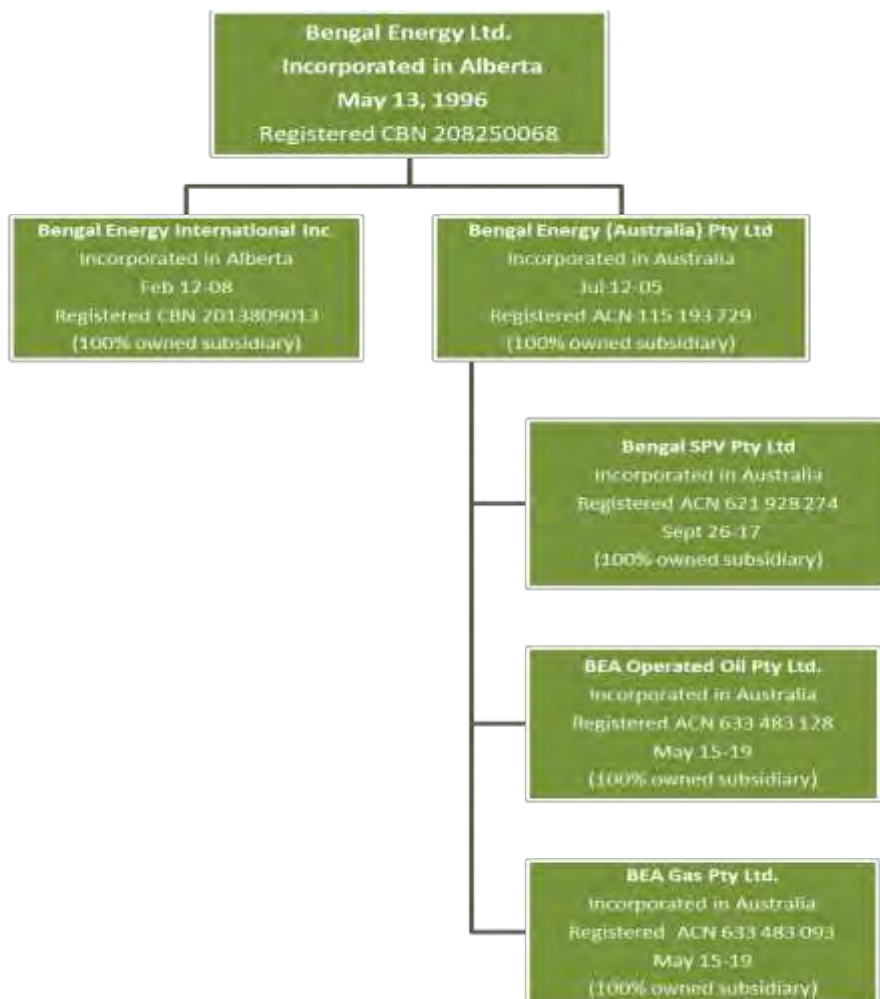

The Corporation was incorporated under the ABCA on May 13, 1996 as "694460 Alberta Inc." On June 18, 1996, the Corporation filed Articles of Amendment to change the Corporation's name to "Briggand Energy Corp.", and on October 8, 1996 to amend its share capital and to remove the private company restrictions from its Articles of Incorporation. Following the acquisition of Canop International Resource Ventures Inc. ("**Canop IRV**"), the Corporation changed its name to "Canop Worldwide Corp." on March 11, 1997. Canop Worldwide Corp. and Canop IRV were subsequently amalgamated on April 1, 1999. On September 25, 2002, the Corporation's name was changed to "Avery Resources Inc." and its outstanding shares were consolidated on a ten-for-one basis. On July 17, 2008, the Corporation's name was changed to "Bengal Energy Ltd." and the shares were consolidated on a five-for-one basis.

The Corporation has its registered office at 2400, 525 – 8th Avenue S.W., Calgary, Alberta T2P 1G1 and its head and principal office at 1110, 715 – 5th Avenue S.W., Calgary, Alberta T2P 2X6.

The Bengal Shares trade on the TSX under the symbol "BNG".

Intercorporate Relationships

The following chart illustrates the Corporation's corporate structure as at the date hereof:

DESCRIPTION OF THE BUSINESS AND OPERATIONS

General

Bengal is an international junior oil and natural gas company based in Calgary, Alberta, Canada and engaged in the business of acquiring international oil and natural gas properties and exploring for, developing and producing oil and natural gas, primarily in Australia. The Corporation has oil production in the Cooper/Eromanga Basin in Australia and an active inventory of oil and natural gas opportunities in Australia. The Corporation also is currently awaiting finalization of its exit from its offshore project in India. It has successfully concluded its onshore Joint Venture and final payment of US\$ 73,900 was received by Bengal on September 16, 2020. The operator has confirmed the NO Dues Certificate will come into effect and all claims, dues, disputes and differences have been settled between Bengal and its joint venture partner. According to the Company's records on this permit the Corporation has exited the permit.

Corporate Strategy

Bengal has producing and prospective light crude oil-weighted assets in Australia. Bengal offers exposure to lower risk, current production and cash flow, combined with longer-term high potential impact exploration projects. The Corporation's strategy is to achieve per share growth in cash flow, production and reserves while establishing an attractive portfolio of future drilling and exploration opportunities. To accomplish this, Bengal will continue to pursue an integrated growth strategy including focused exploration, controlled exploitation, as well as strategic acquisitions within and in proximity to its primary areas of focus. Bengal intends to grow its resource and reserves base within its existing acreage, most of which were acquired through bid rounds and farm-ins in Australia. Bengal also intends to continue building strategic alliances with appropriate local partners and large operators in Bengal's primary areas of focus. In addition, the Corporation is active in identifying and analyzing production acquisition opportunities within its core areas in onshore Australia and in royalty friendly, resource rich jurisdictions here in North America. Expanding the regions in which to consider potential acquisitions is done with the full intention to add size and financial capability to fund the Corporation's strong growth initiatives in Australia.

Management of the Corporation will consider asset and corporate acquisition opportunities that meet Bengal's business parameters. Bengal has the skills and resources necessary to achieve its stated objectives, participation in the exploration and development of oil and natural gas has a number of inherent risks. See "*Risk Factors*" herein.

In reviewing potential drilling or acquisition opportunities, Bengal considers the following criteria:

- (i) risk capital to secure or evaluate the opportunity;
- (ii) risked return versus cost of capital;
- (iii) the performance characteristics of the Corporation's oil and natural gas properties;
- (iv) oil and natural gas production levels;
- (v) the quality of oil and natural gas reserves and recovery rates;
- (vi) the potential for additional reservoir development;
- (vii) capital expenditure programs;
- (viii) supply and demand for oil and natural gas and commodity prices;
- (ix) drilling plans;

- (x) availability of rigs, equipment and other goods and services;
- (xi) whether sufficient infrastructure exists to provide for planned activity;
- (xii) expectations regarding the Corporation's ability to raise capital and to continually add to reserves through acquisitions, exploration and development;
- (xiii) treatment under governmental regulatory regimes and tax laws; and
- (xiv) realization of the anticipated benefits of acquisitions and dispositions.

In addition to the above criteria, in circumstances where Bengal seeks to acquire significant assets with proven reserves, prior to the investment decision being finalized, Bengal will look to obtain an independent engineering report (whether from the vendor of such assets or otherwise) relating to such reserves.

Bengal may approve asset or corporate acquisitions or investments that do not conform to these guidelines based upon its consideration of the qualitative aspects of the subject properties including risk profile, technical upside, reserve life, immediacy of production additions, asset quality and acquisition costs.

GENERAL DEVELOPMENT OF THE BUSINESS

The following is a summary of the business operations of the Corporation for the periods shown.

Fiscal Year Ended March 31, 2019

PL 303, Barta Block Cuisinier (controlling permit ATP 752, Barta Block)

In September 2018, Bengal and its joint venture parties completed the Barta West 3D seismic interpretation and drilled the Chookola-1 exploration well located 11 km to the southwest of the Cuisinier field, and outside PL 303. Chookola-1 encountered oil shows at multiple levels; however, no commercial pay was identified at this location. Bengal and its joint venture partners decided to plug and abandon the well.

During Q2 and Q3 of the fiscal year 2019, the Corporation's joint venture on Barta Block Cuisinier PL 303 conducted a fracture stimulation campaign on four wells. Three of the four wells were successful and the Cuisinier North-1, Shefu-1 and Cuisinier-24 wells were brought online in September 2018. The Cuisinier-19 well was fracture stimulated in a later program in December 2018 but was unsuccessful.

In February 2019, Bengal and its joint venture partners commenced its 2019 Cuisinier drilling campaign. This campaign consisted of five wells including four development wells and one appraisal well within Cuisinier PL 303. Three wells were successful in encountering oil and the other two in the program were plugged and abandoned.

ATP 732 Tookoonooka

On January 9 2019, the Corporation lodged a second Relinquishment Notice with the Queensland Government's Department of Natural Resources and Mines nominating the relinquishment of 301 sub-blocks (33.33% of the original size of the tenement or approximately 227,000 acres) pursuant to the mandatory relinquishment requirement for the permit. This nomination was approved by the Department of Natural Resources and Mines on January 10, 2019. Following this relinquishment, Bengal retains 275 sub-blocks or approximately 208,000 acres until March 31, 2023.

Credit Facility

Pursuant to the Amendment, the Credit Facility was further amended to delay the majority of principal payments into 2019. The Credit Facility is secured by the Corporation's producing assets in the Cuisinier field in Australia's Cooper Basin, had a five and one-half year term and an interest rate of US LIBOR plus 3.2%.

Under the Amendment, the Corporation was required to make a US\$1.5 million principal payment on December 31, 2018 and a further US\$5.0 million on June 30, 2019 and US\$6.0 million on December 30, 2019. In addition, the Corporation had agreed to amend the debt service coverage ratio covenant definition, provide for a cash sharing arrangement that requires the Corporation to deposit 50% of free cash flow against the outstanding loan amount and agree to a reserve-based review by April 30, 2019. Pursuant to these terms, the Corporation repaid US\$131,000 during Q3 fiscal 2019.

On November 19, 2018, the Corporation and Westpac entered into a revised amendment agreement to the Credit Facility to defer all principal payments previously required under the Amendment to February 15, 2020. This revised amendment required the Corporation to make a single payment of the outstanding amount owing on the Credit Facility on the February 15, 2020 repayment date. The revised amendment also increased the interest rate from US LIBOR plus 3.2% to US LIBOR plus 3.75% effective January 1, 2019. All other terms and conditions previously provided under the Amendment remained in effect.

On May 29, 2019, the Corporation and Westpac entered into an amendment to the November 19, 2018 agreement that deferred all principal payments from February 15, 2020 to April 1, 2020. All previous terms under the November 19, 2018 amendment remained in effect.

Fiscal Year Ended March 31, 2020

General

On July 2, 2019, the Corporation's Vice President of Exploration, Gordon MacMahon resigned.

PL 303, Barta Block Cuisinier (controlling permit ATP 752, Barta Block)

The Cuisinier 29 well is on production from the newly discovered DC-50 zone. After initial decline the well has stabilized at approximately 100 bbls/d of light crude oil (30 bbls/d net).

Planning and drilling location selection for the 2020 multi-well development and appraisal drilling campaign were deferred due to the onset of the COVID-19 pandemic and low oil prices. Timing of restarting the campaign will be reassessed in future periods based on pricing and financial conditions at that time.

The pilot reservoir pressure maintenance scheme was delayed to Q2 2021. The location of this pilot is in the southeast quadrant of the Cuisinier pool, with injection of water to take place at the Cuisinier 24 well. The broad nature of the Cuisinier structure combined with variable flank aquifer pressure support has resulted in pressure depletion within the central portion of the Cuisinier pool.

ATP 934 Barrolka (100% WI)

ATP 934 is the Corporation's 100% owned natural gas exploration block. In order to mitigate both financial and development risk, Bengal has done extensive state-of-the-art geophysical work that has not been widely applied in Australia and which gives a higher degree of confidence in the block and focuses on the most likely prospects.

PL 114 Wareena, PL 157 Ghina, PL 188 Ramses, PL 411 Karnak, PPL 138 pipeline (100% WI)

In September of 2019 the Corporation acquired a 100% working interest in four PLs and a natural gas pipeline connected to transportation infrastructure into the Eastern Australia Gas Market. These non-producing PLs are highly compatible with and in close proximity to ATP 934. The Corporation obtained ownership of the respective PLs subject to routine regulatory approvals which remain outstanding. Bengal continues to integrate subsurface data from the PLs to enhance the Corporation's understanding of ATP 934 and to finalize the selection of exploration and appraisal drilling locations and completion programs on selected wells.

ATP 732 Tookoonooka (100% WI)

In June 2019, the Corporation applied for an amendment to the LWP for the third term of the ATP 732 permit. On October 22, 2019, the Corporation received approval from the Queensland regulatory authority for an amended LWP for the third, four-year term commencing April 1, 2019 to March 31, 2023. The amended LWP revised the scope of the LWP to include minimum activities of reprocessing seismic and inversion work with an estimated cost of \$50K and geological and geophysical investigation at an estimated cost of \$50K during the four-year term.

Credit Facility

On November 5, 2019, Bengal and Westpac agreed to further delay the maturity date of the Credit Facility to October 31, 2020. All previous terms and conditions remain the same except for the interest rate which moved from plus 3.75% to plus 3.95% US LIBOR.

See Recent Development – Credit Facility below.

Fiscal Year Ended March 31, 2021**Recent Developments*****ATP 934 Barrolka Permit***

On April 24, 2020, the Corporation received regulatory approval for a special amendment to the initial work program on ATP 934. The Corporation had no further expenditure commitments on the permit before February 28, 2021 when the permit was up for renewal. As a condition of the approval of the special amendment, the Corporation agreed to relinquish an additional 17 % of the permit in addition to the 33 % mandatory relinquishment for a total of 50 % (240 sub-blocks) of the acreage at the end of the first term on the permit. The acreage subject to the 50% relinquishment was determined by Bengal and consisted of the least prospective land from a technical perspective and with the most challenging access conditions under the terms of the existing Environmental Authority granted by the regulator. In return, the Corporation was granted a reduction in the total commitment from \$12.3 million to \$1.2 million which has been expended. Effective March 1, 2021 ATP 934 was renewed for a period of six years over an area of 237 sub blocks (179,000 acres). The Later Work Program is comprised of Geological and Geophysical studies and the drilling of up to four wells or three wells and 260 square kilometres of 3D seismic. One further relinquishment of 118 sub blocks (50%) (88,972 acres) is required by February 28, 2023. . ATP 934 was evaluated for any impairment triggers according to International Accounting Standards (IAS) 36. Although the Corporation was aware that a reduction in commitment level would be granted prior to the year end, no impairment triggers were uncovered.

Santos Farm-in – ATP 934

On July 24, 2020 Bengal's 100% owned Australian Subsidiaries executed a Farm-in Agreement with Santos QNT Pty Ltd ("**Santos**") whereby Santos has committed to pay 100% of the cost of drilling a well on the farm-in lands to test the Permian section and either case and suspend or abandon the well to earn a 60% working interest in 137 sub blocks (approximately 103,000 acres) of the total 237 sub blocks (approximately 178,698 acres) remaining in the ATP. The well is scheduled to be drilled in H2 2021 and the Santos 60% earning will be effective upon completion of the drilling of the well. If successful, pipeline connection into the nearby Tartulla gas transportation system is an immediate possibility. The well will qualify as a part of the Later Work Program.

PL 114 Wareena, PL 157 Ghina, PL 188 Ramses, PL 411 Karnak, PPL 138 pipeline (100% WI)

In September of 2019 the Corporation acquired a 100% working interest in four PLs and a natural gas pipeline connected to transportation infrastructure into the Eastern Australia Gas Market. This transaction was completed in March of 2021. These non-producing PLs are highly compatible with and in close proximity to ATP 934. Bengal continues to integrate subsurface data from the PLs to enhance the Corporation's understanding of ATP 934 and to finalize the selection of exploration and appraisal drilling locations and completion programs on selected wells.

Our planning is to recomplete the Wareena wells and refurbish the pipeline followed by the completion of the Poolowanna Zone in the Ramses 2 well for oil production testing. The Ghina well which is cased will be perforated and flow tested for gas and liquids in the same program. Further work on Karnak is forecast in the 2022-2023 period.

Cauvery Basin, Onshore India (CY-ONN-2005/1)

On January 16, 2020, following a joint venture reconciliation, Bengal was advised by the joint venture operator that approximately \$97,000 would be payable to the Corporation and a 30% working interest portion of the security deposit on the permit would be redistributed by the Indian Government. On June 5, 2020, the Corporation received a No Dues Certificate letter from the operator advising the Corporation that the joint venture account would be closing. Final payment of US\$73,900 was received by the Corporation on September 16, 2020. The operator has confirmed the No Dues Certificate will come into effect and all claims, dues, disputes and differences have been settled between Bengal and its joint venture partners. According to the Company's records on this permit, the Corporation has exited the permit.

Credit Facility

On February 26, 2021, the Company closed a non-brokered private placement (the "**Private Placement**") of Bengal Shares to Texada Capital Management Ltd. ("**Texada**"), a company owned and controlled by Mr. Wheeler and his spouse. Under the Private Placement, the Company issued 330,720,000 Bengal Shares to Texada at a price of \$0.05 per share for total proceeds of approximately \$16.5 million (the "**Proceeds**"). In conjunction with the Private Placement, and in accordance with the Company's focus through the balance of 2020 and early 2021 on resolving its debt position with Westpac, on February 26, 2021, the Company also completed a debt settlement transaction (the "**Debt Settlement**") between Westpac and Bengal Australia Ltd. Pty ("**Bengal Pty**"), a wholly-owned subsidiary of the Company. The Debt Settlement was in respect of the settlement of all indebtedness and liabilities owing by Bengal Pty to Westpac under the Credit Facility. Prior to the Debt Settlement, the total balance outstanding under the Credit Facility was approximately US\$12.5 million (the "**Outstanding Amount**"). \$12.6 million of the Proceeds (being the Canadian dollar equivalent of US\$10.0 million based on the daily average CAD\$/USD\$ foreign exchange rate published by the Bank of Canada as at February 24, 2021) were applied to the Credit Facility as settlement of the Outstanding Amount.

The Company has, over the course of the last three years, evaluated numerous early stage opportunities to secure additional funding, including strategic transaction opportunities that could potentially include access to additional capital for the Company, in order to fund ongoing operations and development activity, and, as required, to repay the Credit Facility. The final terms of the Private Placement and Debt Settlement were reviewed in detail and recommended for approved by the Board and by the independent committee based on the following factors and considerations: (a) the amounts outstanding under the Credit Facility; (b) the impending maturity of the Credit Facility and the fact that Westpac had extended the maturity date several times in the past and had expressed an unwillingness to provide any further extensions; (c) the ultimately unsuccessful efforts by the Company over the past number of years to find additional financing, or a suitable strategic transaction, in Canada and internationally, to refinance some or all of the Credit Facility and to fund ongoing operations; (d) the fact that the Company had been unsuccessful to date in finding a senior secured debt facility or other financing source in replacement of the Credit Facility; (e) the fact that the Private Placement proposal was at a premium to Bengal's trading price, including its volume weighted average trading price for the prior several months; (f) the fact that the Debt Settlement was being conducted at a discount to the principal amount owing under the Credit Facility; (g) that the status quo alternative was not in the Company's best interests, as on maturity of the Credit Facility, it was expected that Westpac would seek to enforce its security over all of Bengal's assets; (h) completion of the Private Placement and Debt Settlement transactions would result in the removal of all of Bengal's debt, the elimination of future interest payments under the Credit Facility and provide Bengal with the ability to deploy capital into its development and exploration programs, thereby significantly improving Bengal's financial situation.

Significant Acquisitions

The Corporation did not complete any acquisitions during the most recently completed financial year for which disclosure is required under Part 8 of NI 51-102.

STATEMENT OF RESERVES DATA AND OTHER OIL AND GAS INFORMATION

The statement of reserves data and other oil and gas information set forth below (the "**Statement**") has an effective date of March 31, 2021 and a preparation date of June 15, 2021.

Disclosure of Reserves Data

The Corporation engaged GLJ to provide an evaluation of the Corporation's proved, proved plus probable and proved plus probable plus possible reserves as at March 31, 2021. The reserves data set forth below (the "**Reserves Data**") is based upon the GLJ Report. GLJ is an independent reserves evaluator pursuant to NI 51-101 and the COGE Handbook. The Reserves Data summarizes the oil, natural gas liquids and natural gas reserves of the Corporation and the net present values of future net revenue for these reserves using forecast prices and costs. The GLJ Report has been prepared in accordance with the standards contained in the COGE Handbook and the reserve definitions contained in NI 51-101. The reserves committee of the board of directors of the Corporation has reviewed and approved the GLJ Report. The Report of Management and Directors on Oil and Gas Disclosure and the Report on Reserves Data by the Independent Qualified Reserves Evaluator are attached as Schedules "A" and "B" hereto, respectively.

All of the Corporation's reserves are located in Australia.

All evaluations of future net production revenue set forth in the tables below are based on forecast prices and costs and are after direct lifting costs, normal allocated overhead and future capital investments. It should not be assumed that the estimates of future net revenues presented in the tables below represent the fair market value of the reserves. There is no assurance that the forecast prices and costs assumptions will be attained and variances could be material. The recovery and reserve estimates of the Corporation's oil, natural gas liquids and natural gas reserves provided herein are estimates only and there is no guarantee that the estimated reserves will be recovered. Actual oil, natural gas and natural gas liquid reserves may be greater than or less than the estimates provided herein.

Reserves Data (Forecast Prices and Costs)

**SUMMARY OF OIL AND GAS RESERVES
AS OF MARCH 31, 2021
FORECAST PRICES AND COSTS**

CORPORATE TOTAL RESERVES CATEGORY:	LIGHT CRUDE OIL AND MEDIUM CRUDE OIL		HEAVY CRUDE OIL		CONVENTIONAL NATURAL GAS		NATURAL GAS LIQUIDS		TOTAL

Proved Plus Probable	Light Crude Oil and Medium Crude Oil (Including solution gas and associated by-products)	87,568	16.12	2.69
	Heavy Crude Oil (Including solution gas and associated by-products)	—	—	—
	Conventional Natural Gas (Including associated by-products but excluding solution gas and by-products from oil wells)	—	—	—
Total Proved Plus Probable		87,568	16.12	2.69

Notes:

- (1) Unit values are based on the Corporation's net reserves.
(2) The estimated values disclosed do not represent fair market value.

- (3) Other Bengal revenue and costs not related to a specific product type have been allocated proportionately to the specified product types.

Notes Regarding the Reserves Data Tables:

1. Numbers may not add due to rounding.
2. For securities reporting, key economic assumptions will be the prices and costs used in the GLJ Report. The required assumptions may vary by jurisdiction, for example: (a) forecast prices and costs, in Canada under NI 51-101; and (b) constant prices and costs, based on the average of the first day posted prices in each of the 12 months of the reporting issuer's financial year, under U.S. Securities and Exchange Commission rules (this is optional disclosure under NI 51-101).
3. The crude oil, natural gas liquids and natural gas reserve estimates presented in the GLJ Report are based on the definitions and guidelines contained in the COGE Handbook. A summary of those definitions are set forth below:

Reserves estimates have been prepared by GLJ in accordance with standards contained in the COGE Handbook. The following reserves definitions are set out by the Canadian Securities Administrators in NI 51-101 (in Part 2 of the Glossary to NI 51-101) with reference to the COGE Handbook.

Reserves Categories

Reserves are estimated remaining quantities of oil and natural gas and related substances anticipated to be recoverable from known accumulations, as of a given date, based on:

- analysis of drilling, geological, geophysical, and engineering data;
- the use of established technology; and
- specified economic conditions, which are generally accepted as being reasonable, and shall be disclosed.

Reserves are classified according to the degree of certainty associated with the estimates.

Proved Reserves

Proved reserves are those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves.

Probable Reserves

Probable reserves are those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves.

Possible Reserves

Possible reserves are those additional reserves that are less certain to be recovered than probable reserves. It is unlikely that the actual remaining quantities recovered will exceed the sum of the estimated proved plus probable plus possible reserves.

Other criteria that must also be met for the classification of reserves are provided in Section 5.5 of the COGE Handbook.

Development and Production Status

Each of the reserves categories (proved, probable and possible) may be divided into developed and undeveloped categories.

Developed Reserves

Developed reserves are those reserves that are expected to be recovered from existing wells and installed facilities or, if facilities have not been installed, that would involve a low expenditure (for example, when compared to the cost of drilling a well) to put the reserves on production. The developed category may be subdivided into producing and nonproducing.

Developed Producing Reserves

Developed producing reserves are those reserves that are expected to be recovered from completion intervals open at the time of the estimate. These reserves may be currently producing or, if shut in, they must have previously been on production, and the date of resumption of production must be known with reasonable certainty.

Developed Non-producing Reserves

Developed non-producing reserves are those reserves that either have not been on production, or have previously been on production, but are shut in, and the date of resumption of production is unknown.

Undeveloped Reserves

Undeveloped reserves are those reserves expected to be recovered from known accumulations where a significant expenditure (for example, when compared to the cost of drilling a well) is required to render them capable of production. They must fully meet the requirements of the reserves category (proved, probable and possible) to which they are assigned.

In multi-well pools, it may be appropriate to allocate total pool reserves between the developed and undeveloped categories or to subdivide the developed reserves for the pool between developed producing and developed non-producing. This allocation should be based on the estimator's assessment as to the reserves that will be recovered from specific wells, facilities, and completion intervals in the pool and their respective development and production status.

4. Levels of Certainty for Reported Reserves

The qualitative certainty levels referred to in the definitions above are applicable to individual reserves entities (which refers to the lowest level at which reserves calculations are performed) and to reported reserves (which refers to the highest level sum of individual entity estimates for which reserves estimates are presented). Reported reserves should target the following levels of certainty under a specific set of economic conditions:

- at least a 90 percent probability that the quantities actually recovered will equal or exceed the estimated proved reserves;
- at least a 50 percent probability that the quantities actually recovered will equal or exceed the sum of the estimated proved plus probable reserves; and
- at least a 10 percent probability that the quantities actually recovered will equal or exceed the sum of the estimated proved plus probable plus possible reserves.

A quantitative measure of the certainty levels pertaining to estimates prepared for the various reserves categories is desirable to provide a clearer understanding of the associated risks and uncertainties. However, the majority of reserves estimates are prepared using deterministic methods that do not provide a mathematically derived quantitative measure of probability. In principle, there should be no difference between estimates prepared using probabilistic or deterministic methods.

Additional clarification of certainty levels associated with reserves estimates and the effect of aggregation is provided in Section 5 of the COGE Handbook.

5. Forecast Costs and Price Assumptions

GLJ employed the following pricing, exchange rate and inflation rate assumptions in estimating Bengal's Reserves Data using forecast prices and costs as at March 31, 2021.

SUMMARY OF PRICING AND INFLATION RATE ASSUMPTIONS FORECAST PRICES AND COSTS (AUSTRALIAN PROPERTIES AS OF MARCH 31, 2021)

YEAR FORECAST	BRENT (\$Cdn/Bbl)	Exchange Rate ⁽³⁾ (\$Cdn /\$ US)	BRENT ⁽⁴⁾ (\$US/Bbl)
2021 Q2-Q4 ⁽¹⁾	81.13	0.795	64.50
2022	78.58	0.790	62.08
2023	79.09	0.780	61.69
2024	80.56	0.780	62.84
2025	82.08	0.780	64.02
2026	83.61	0.780	65.22
2027	85.19	0.780	66.45
2028	86.79	0.780	67.70
2029	88.42	0.780	68.97
2030	90.19	0.780	70.35
2031+	+2%/year	0.780	+2%/year

Notes:

- (1) 2021 forecast pricing is for last nine months (April 1 - December 31) of 2021.
- (2) Inflation rates for forecasting prices and costs.
- (3) Exchange rates used to generate the benchmark reference prices in this table.
- (4) Crude oil pricing has been estimated by GLJ as BRENT blend in US dollars. Historical futures contract price is an average of the daily settlement price of the near month contract over the calendar month.

Unless otherwise stated, the gas price reference point is the receipt point on the applicable state gas transmission system known as the plant gate. The plant gate price represents the price before raw gathering and processing charges are deducted. Weighted average historical prices realized by the Corporation for the year ended March 31, 2021 were \$64.89 /bbl for light crude oil and medium crude oil. All of the Corporation's oil sales in Australia are based upon Brent oil pricing in US dollars.

6. Well abandonment and reclamation costs for wells with reserves or assigned have been included. Additional abandonment costs associated with lease facility abandonment and reclamation expenses have not been included in this analysis. The forecast price and cost assumptions assume the continuance of current laws and regulations.
7. The extent and character of all factual data supplied to GLJ were accepted by GLJ as represented. No field inspection was conducted.
8. The forecast price and cost assumptions assume the continuance of current laws and regulations.

9. The after-tax net present value of the Corporation's properties here reflects the tax burden on the properties on a stand-alone basis and utilizing the Corporation's tax pools. It does not consider the business-entity-level tax situation, or tax planning. It does not provide an estimate of the value at the level of the business entity, which may be significantly different. The financial statements and the management's discussion and analysis of the Corporation should be consulted for information at the level of the business entity. Furthermore, the tax methodology used assumes that all tax pools are utilized to the maximum depreciation rate as currently permitted.

Reserves Reconciliation

RECONCILIATION OF CORPORATION GROSS RESERVES BY PRODUCT TYPE FORECAST PRICES AND COSTS

Additional Information Relating to Reserves Data*Undeveloped Reserves*

The following discussion generally describes the basis on which Bengal attributes proved and probable undeveloped reserves and its plans for developing those undeveloped reserves.

(a) Proved Undeveloped Reserves

The following table sets forth the volumes of proved undeveloped reserves that were first attributed in each of Bengal's three most recent financial years:

	Light Crude Oil and Medium Crude Oil (Mbbbl)		Heavy Crude Oil (Mbbbl)		Conventional Natural Gas (MMcf)		Natural Gas Liquids (Mbbbl)		Total Oil Equivalent (MBOE)	
	First Attributed ⁽¹⁾	Total at Year End	First Attributed	Total at Year End	First Attributed	Total at Year End	First Attributed	Total at Year End	First Attributed	Total at Year End
2019	297	1,723	–	–	–	–	–	–	297	1,723
2020	–	1,808	–	–	–	–	–	–	–	1,808
2021⁽¹⁾	–	1,808	–	–	–	–	–	–	–	1,808

Note:

- (1) Refers to reserves first attributed in this fiscal year ending on the effective date March 31, 2021.
(2) Columns may not add exactly due to rounding.

Proved undeveloped reserves are associated with both undrilled locations and drilled wells that have not yet been logged, or tested as of the effective date of the reserve evaluation. Proved undeveloped reserves partially relate to planned infill drilling locations. The majority of the proved undeveloped locations are scheduled to be on production within a five-year time frame.

As of March 31, 2021, Bengal's proved undeveloped reserves represented 84% of Bengal's total proved reserves, with proved plus probable undeveloped reserves representing 92% of its proved plus probable reserves. Volatile commodity prices and the COVID-19 global pandemic has delayed planned drilling programs, which will be responsive to commodity price environments in the future. Through an ongoing planned drilling program in Australia over the next 5 years, it is anticipated that a portion of the proved undeveloped reserves will be converted to proved developed, and the majority of probable undeveloped to probable.

(b) Probable Undeveloped Reserves

The following table sets forth the volumes of probable undeveloped reserves that were first attributed in each of Bengal's three most recent financial years:

	Light Crude Oil and Medium Crude Oil (Mbbbl)		Heavy Crude Oil (Mbbbl)		Conventional Natural Gas (MMcf)		Natural Gas Liquids (Mbbbl)		Total Oil Equivalent (MBOE)	
	First Attributed ⁽¹⁾	Total at Year End	First Attributed	Total at Year End	First Attributed	Total at Year End	First Attributed	Total at Year End	First Attributed	Total at Year End
2019	249	3,534	–	–	–	–	–	–	249	3,534
2020	–	3,509	–	–	–	–	–	–	–	3,509
2021⁽¹⁾	–	3,509	–	–	–	–	–	–	–	3,509

Note:

- (1) Refers to reserves first attributed in this fiscal year ending on the effective date March 31, 2021.

Probable undeveloped reserves are generally those reserves tested or indicated by analogy to be productive, infill drilling locations and lands contiguous to production. The majority of these reserves are planned to be on stream within a five-year timeframe.

In general, once probable undeveloped reserves are identified, they are scheduled into Bengal's development plans.

A number of factors could result in delayed or cancelled development plans. Such factors may include changing economic conditions due to oil and natural gas pricing and demand, operating and capital expenditure fluctuations. Changing technical conditions resulting in production anomalies such as premature water break through or higher than anticipated production declines may result in the delay or cancellation of development plans. In wells that have encountered multiple zones, a prospective zone completion may be delayed until the initial completion is no longer economic. A larger development program may need to be spread out over several years to optimize capital allocation, facility utilization and drilling rig availability in the remote part of Australia where the Corporation has oil development opportunities. Surface access issues associated with landowners, weather conditions or regulatory approvals could also influence development plans.

The GLJ Report indicates that Bengal has 3,627 Mbbls of light crude oil and medium crude oil, no conventional natural gas and no natural gas liquids reserves defined as "probable undeveloped". The change in "probable undeveloped" light crude oil and medium crude oil reserves year over year results from extensions, discoveries, and technical revisions associated with the Murta formation within the Cuisinier property, economic factors and proved production. There are no probable undeveloped conventional natural gas and NGLs reserves as a result of economic factors and no future production.

(c) Significant Factors or Uncertainties Affecting Reserves Data

The process of evaluating reserves requires significant judgments and decisions based on available geological, geophysical, engineering and economic data. These estimates may change substantially as additional data from ongoing development activities and production performance becomes available and as economic conditions impacting oil and natural gas prices and costs change. The reserve estimates contained herein are based on current production forecasts, prices and economic conditions and other factors and assumptions that may affect the reserve estimates and the present worth of the future net revenue therefrom. These factors and assumptions include, among others: (i) historical production in the area compared with production rates from analogous producing areas; (ii) initial production rates; (iii) production decline rates; (iv) ultimate recovery of reserves; (v) success of future development activities; (vi) marketability and pricing of production; (vii) effects of government regulations; and (viii) other government levies imposed over the life of the reserves.

As circumstances change and additional data becomes available, reserve estimates also change. Estimates are reviewed and revised, either upward or downward, as warranted by the new information. Revisions are often required due to changes in well performance, prices, economic conditions and government restrictions. Revisions to reserve estimates can arise from changes in year-end prices, reservoir performance and geologic conditions or production. These revisions can be either positive or negative.

The Corporation does not anticipate any significant development costs or operating costs, the need to build a major pipeline or other major facility before production of reserves can begin, or contractual obligations to produce and sell a significant portion of production at prices substantially below those which could be realized but for those contractual obligations.

For additional details of important economic factors or significant uncertainties that may affect the components of the reserves data in this Statement, see the Corporation's management's discussion and analysis of financial condition results of operations and cash flows for the fiscal year ended March 31, 2021 as well as the "*Risk Factors*" and "*Statement of Reserves Data and Other Oil and Gas Information – Principal Properties*" sections herein.

The Corporation does not anticipate any unusually high abandonment or reclamation costs. Additional information related to our estimated share of future environmental and reclamation obligations for the working interest properties (including all abandonment and reclamation costs associated with all existing wells, facilities, pipelines and leases) can be found in Bengal's audited financial statements for the year ended March 31, 2021 and the accompanying management's discussion and analysis, which are available on SEDAR at www.sedar.com.

(d) Future Development Costs

The following table sets forth development costs deducted in the estimation of the Corporation's future net revenue attributable to the reserve categories noted below:

CORPORATE TOTAL \$M	Forecast Prices and Costs	
Year	Proved	Proved Plus Probable
2021	-	-
2022	2,909	3,215
2023	5,229	5,985
2024	6,667	7,438
2025	6,800	7,480
2026	6,936	7,630
2027	-	7,075
2028	-	7,217
2029	-	7,361
2030	-	7,508
2031	-	-
Thereafter	-	-
Total Undiscounted	28,541	60,909
Total Discounted @ 10%	20,434	36,733

Notes:

- (1) Future development costs shown are associated with booked reserves in the GLJ Report and do not necessarily represent the Corporation's full exploration and development budget.
- (2) The numbers in this table may not add exactly due to rounding.

On an ongoing basis, Bengal will use internally generated cash flow from operations, debt and new equity issues if available on favourable terms to finance its capital expenditure program. Bengal estimates that \$28.54 million will be sufficient to fund the future development costs of its proved reserves disclosed above and \$60.91 million will be sufficient to fund the future development costs of the proved plus probable reserves disclosed above. The cost of funding is not expected to have any effect on disclosed reserves or future net revenue or make the development of a property uneconomic for the Corporation.

Other Oil and Gas Information

Principal Properties

The following is a description of the Corporation's principal oil and natural gas properties as at March 31, 2021, unless otherwise stated. Production stated is gross production to the Corporation and, unless otherwise stated, is average daily production during the year ended March 31, 2021 based on operator statements. The reserve amounts stated are Gross reserves, as at March 31, 2021 based on forecast costs and prices as evaluated in the GLJ Report (see "Statement of Reserves Data and Other Oil and Gas Information"). The estimates of reserves and future net revenue for individual properties may not reflect the same confidence level as estimates of reserves and future net revenue for all properties, due to the effects of aggregation.

The Corporation is engaged in the exploration for, and development and production of, crude oil and natural gas in the Cooper/Eromanga Basin in Australia all of which is on-shore. Bengal has a large acreage position across the onshore Cooper/Eromanga Basin of Australia of over 800,000 Gross acres. Bengal's Cooper/Eromanga acreage is split among three principal separate blocks of land that are covered by: ATP 752, ATP 732 and ATP 934 as well as the newly acquired PLs - PL 114 Wareena, PL 157 Ghina, PL 188 Ramses, and PL 411 Karnak. In addition the Corporation holds a 10% working interest in AC/RL 10 located in the Ashmore Cartier area of the Timor Sea, north of Australia comprised of approximately 168 km² (41,514 acres).

Onshore Australia:

PL 303 and PL 1028 – (controlling permit ATP 752, Barta and Wompi Sub-blocks, Queensland, Australia)

Bengal has multiple interests in ATP 752. ATP 752 is located on the Cooper/Eromanga Basin and is subdivided into the Barta Sub-Block (Bengal 30.357% working interest) and the Wompi Sub-Block (Bengal 38.08% working interest).

The Barta Sub-Block comprises approximately 94,147 Gross acres (28,583 Net acres) as well as the 15,815 Gross acre (4,801 Net acres) PL 303, and approximately 2,965 Gross acres (900 Net acres) on PL 1028 while the Wompi sub-block including PCA 155 Nubba/ Yilgarn, comprises a total of 22,487 Gross acres (8,563 Net acres). The land is subject to a Sliding Scale royalty payable on production to the Queensland Government, along with a 1% royalty reserved to the native title owners on a portion of the southeast part of PL 1028.

The ATP 752 properties include 21 Gross (6.37 Net) producing light crude oil wells and 0 Gross (0 Net) producing natural gas wells as well as 6 Gross (1.82 Net) non-producing light crude oil wells and 1 Gross (0.38 Net) non-producing natural gas wells. Average daily production from the properties for the year ended March 31, 2021, was BOE/d and was weighted 100% to light crude oil. As at March 31, 2021, the GLJ Report attributed proved plus probable Corporation Gross reserves of 5,789.7 Mbbbls of light crude oil and NGLs and 0 MMcf of natural gas to the ATP 752 properties.

On the Wompi sub-block on March 31, 2017 Bengal was granted the Nubba/Yilgarn PCA 155.

On July 31, 2018, 287,967 acres of ATP 752 were relinquished. On March 14, 2019, Bengal received notice from the Queensland Government of the grant of two PCAs (PCA 206 and PCA 207) that Bengal and its joint venture partners had applied for in January 2018. These PCAs will allow a further 10 years to assess commerciality on the 133 sub-blocks granted which cover the remaining prospective lands lying to the west and north of the Cuisinier field (PL303), in ATP 752 Barta Block.

For additional details, see "General Development of the Business – Fiscal Year Ended March 31, 2019", "General Development of the Business – Fiscal Year Ended March 31, 2020", "General Development of the Business – Fiscal Year Ended March 31, 2021" and "Exploration and Development Activities".

Oil and Gas Wells

The following table sets forth the number and status of oil and gas wells in which the Corporation had a working interest as at March 31, 2021. As at March 31, 2021, the Corporation had an interest in 28 Gross (8.57 Net) oil and natural gas wells as follows, all such wells are onshore wells in Queensland Australia.

	Producing Wells				Non-Producing Wells				Total				TOTAL	
	Oil Wells		Gas Wells		Oil Wells		Gas Wells		Oil Wells		Gas Wells		Gross	Net
	Gross	Net	Gross	Net	Gross	Net	Gross	Net	Gross	Net	Gross	Net		
Total	21	6.37	1	0.38	6	1.82	1	0.38	27	8.19	1	0.38	28	8.57

Notes:

- (1) This table does not include dry wells or abandoned wells.
- (2) The non-producing oil wells and natural gas wells capable of production but which are not currently producing will be re-evaluated with respect to future product prices, proximity to facility infrastructure, design of future exploration and development programs and access to capital.

Of the non-producing wells, that the Corporation held a working interest in during the fiscal year ended March 31, 2021, (1.0 Gross .30 Net) wells were capable of production and had reserves assigned to them.

Properties with No Attributable Reserves

The following table sets out the Corporation's developed and undeveloped land holdings as at March 31, 2021

	Developed Acres		Undeveloped Acres		Total Acres	
	Gross	Net	Gross	Net	Gross	Net
Total	15,815	4,801	610,350	491,607	626,165	496,409
Australia ⁽²⁾	15,185	4,801	610,350	491,607	626,165	496,409

Notes:

- (1) Bengal calculates both its Gross and Net acres on a per lease basis.
- (2) Undeveloped acreage includes PL 1028, PCA 206 and PCA 207 under controlling permit ATP 752 Barta sub-block as well as PCA 155 Nubba/Yilgarn under controlling permit ATP 752 Wompi sub-block, ATP 732, ATP 934, including PL 114 Wareena, PL 157 Ghina, PL 188 Ramses, PL 411 Karnak and AC/RL 10.

For a summary of the Corporation's work commitments in Australia, see the descriptions under the headings "*Other Oil and Gas Information – Principal Properties*" above, as well as "*General Development of The Business – Fiscal Year Ended March 31, 2019*", "*General Development of The Business – Fiscal Year Ended March 31, 2020*", "*General Development of The Business – Fiscal Year Ended March 31, 2021*", above and "*Exploration and Development Activities – Australia*", below.

Onshore Australia:

ATP 732 Tookoonooka, Queensland, Australia

Permit ATP 732 is 207,816 net acres in size subsequent to mandatory relinquishment and has been tested by only eight exploration wells to date. The permit is surrounded by existing Permian gas fields and Jurassic and Cretaceous oil fields. The center of the block was the site of what is believed to have been an ancient (Cretaceous) meteor impact structure.

On March 31, 2019, 301 sub-blocks were relinquished in conformance with the regulatory terms of ATP 732. The remaining retained acreage (approximately 275) sub-blocks will stay in good standing until March 31, 2023. Subsequent to the second relinquishment the carrying value of ATP 732 was written down accordingly to \$5.38 million for the year ended March 31, 2020. JB to confirm

ATP 732 includes no producing wells as at March 31, 2021 and the GLJ Report therefore attributes no reserves to the ATP 732 property.

Bengal is the operator of ATP 732 with a working interest of 100%. The land is subject to a Sliding Scale royalty payable on production to the Queensland Government along with a 1% royalty reserved to the native title owners.

For additional details, see "*General Development of the Business – Fiscal Year Ended March 31, 2019*", "*General Development of the Business – Fiscal Year Ended March 31, 2020*", "*General Development of the Business – Fiscal Year Ended March 31, 2021*" and "*Exploration and Development Activities*".

ATP 934 Barrolka, Queensland, Australia

Bengal currently holds a 100% working interest in the 175,692 net acre ATP 934 block and is the operator. ATP 934 sits in the heart of the Cooper/Eromanga Basin and is surrounded by known liquids rich gas fields. ATP 934 flanks the east margin of the large Barrolka gas field. Recent activity west and south of ATP 934 has resulted in new natural gas discoveries. To date, five undrilled structural leads have been identified as conventional gas drilling opportunities. In 2017 and 2018, seismic re-interpretation involving an AVO/Inversion workflow has resulted in a high grading of more prospective reservoir sand trends on the permit.

The ATP 934 property includes no producing oil wells or producing natural gas wells as at March 31, 2021 and the GLJ Report therefore attributes no reserves to the ATP 934 property.

The land is subject to a Sliding Scale royalty payable on production to the Queensland Government and management expects an additional royalty of between 1% and 1.75%, subject to certain conditions, will be reserved to the native title owners.

For additional details, see "*General Development of the Business – Fiscal Year Ended March 31, 2020*", "*General Development of the Business – Fiscal Year Ended March 31, 2021*", "*General Development of the Business- Recent Developments*" and "*Exploration and Development Activities*".

PL 114 Wareena, PL 157 Ghina, PL 188 Ramses, PL 411 Karnak, PPL 138 pipeline (100% WI), Queensland, Australia

Bengal currently holds a 100% working interest in four PLs and a natural gas pipeline connected to transportation infrastructure into the Eastern Australia Gas Market. The four PLs total 65,977 net acres. These non-producing PLs are compatible with and in close proximity to ATP 934.

Included in this group of assets is an oil-zone completion in a cased well, which is based on the extrapolation of the recovery of 49 barrels of light crude oil on a two hour Drill Stem Test which indicated an estimated daily flow rate of 588 bbls/d, when it was drilled in 2007. Initial oil analysis indicates a high viscosity, which may be problematic in the design of the completion program. Upon completion of a successful test, this well is expected to be immediately equipped for production and the oil sold into the regional market. In addition, the Wareena PL holds two suspended gas wells which in combination produced 6.4 billion cubic feet of natural gas before being suspended due to water inflow. The company believes one or both of these wells can be brought back into production with careful detail paid to draw down pressures and downstream compression. The 100% ownership of these assets presents an appraisal and development opportunity that will be operated by the Corporation and is seen to be not only complementary to our proven producing, non-operated Cuisinier asset, but also as a key stepping stone for Bengal's natural gas platform with immediate market access thanks to an existing pipeline around which future exploration growth through ATP 934 can be undertaken.

The PLs include no producing oil wells or producing natural gas wells as at March 31, 2021 and the GLJ Report therefore attributes no reserves to these properties.

For additional details, see "*General Development of the Business – Fiscal Year Ended March 31, 2020*" and "*General Development of the Business – Fiscal Year Ended March 31, 2021*".

Offshore Australia:

AC/RL10 (formerly AC/P24) Ashmore Cartier Area, Timor Sea, Offshore Australia

In addition to its Cooper/Eromanga properties, the Corporation also holds a 10% working interest in AC/RL 10 located in the Ashmore Cartier area of the Timor Sea, north of Australia comprised of approximately 168 km² (41,514 acres).

During the prior year, Bengal participated in a reprocessing project on the two 3D seismic surveys over AC/RL10 lands, which was completed in May 2020. Seismic interpretation was completed in early 2021.

AC/RL 10 includes no producing wells as at March 31, 2021 and the GLJ Report therefore attributes no reserves to the AC/RL 10 property.

Significant Factors or Uncertainties Relevant to Properties with No Attributable Reserves

For further information relative to significant economic factors and significant uncertainties that have affected or may affect the Bengal properties with no attributable reserves please refer to the "*Risk Factors*" section of this annual information form.

Forward Contracts and Marketing

Although Bengal has no set policy, management of Bengal may use financial instruments to reduce corporate risk in certain situations. Risk management policies will be developed over time as Bengal builds a production base to support sustainable growth. Management will further develop a strategy over time to hedge existing liquids and natural gas production to help protect a base development capital program, guarantee a return or to facilitate financings when concluding a business transaction.

Bengal has entered into financial commodity contracts during prior years as part of its risk management program to manage commodity price fluctuations related to its primary producing assets being the Cuisinier field in Australia's Cooper Basin.

As at March 31, 2021 the Company has no outstanding financial commodity contracts.

Tax Horizon

The Corporation does not expect to pay current income tax for taxation periods associated with its 2021 fiscal year. Depending on production, commodity prices and capital spending levels, management believes that the Corporation will not begin paying current income taxes until 2030 or beyond.

Capital Expenditures

The following table summarizes capital expenditures related to the Corporation's activities for the year ended March 31, 2021:

CAPITAL EXPENDITURES	Canada (M\$)	Australia (M\$)	Total (M\$)
Property Acquisition costs – Proven	–	–	–
Property Acquisition costs – Unproven	–	–	–
Exploration:			
Geological and Geophysical	–	196	196
Drilling	–	–	–
Completions/facilities	–	–	–
Acquisitions	–	–	–
Exploration Subtotal	–	196	196
Development:			
Geological and Geophysical	–	–	–
Drilling	–	13	13
Completions	–	734	734
Acquisitions	–	311	311
Development Subtotal	–	1,058	1,058
TOTAL EXPENDITURES	–	1,254	1,254

Note:

- (1) The numbers in this table may not add due to rounding.

Exploration and Development Activities

No exploratory wells or development wells were completed in the Corporation's most recent financial year. See "General Development of the Business – Fiscal Year Ended March 31, 2021" and "Statement of Reserves Data and Other Oil and Gas Information – Other Oil and Gas Information – Principal Properties" and below for details regarding the Corporation's drilling program.

Australia

See "General Development of the Business – Fiscal Year Ended March 31, 2019", "General Development of the Business – Fiscal Year Ended March 31, 2020", "General Development of the Business – Fiscal Year Ended March 31, 2021" and "Statement of Reserves Data and Other Oil and Gas Information – Other Oil and Gas Information – Principal Properties" for a detailed summary of activities on Bengal's Australian properties.

PL 303, Barta Block Cuisinier (controlling permit ATP 752, Barta Block), Queensland, Australia In the fiscal year ended March 31, 2021, the Corporation and its joint venture partners drilled no wells. Production rates followed forecast declines through the year. Work continued on the implementation of the water injection/reservoir pressure maintenance project with initial injection expected to commence in Q2 2021.

Oil prices which had been adversely affected by geopolitical events and the COVID-19 pandemic began to recover and current and forecast oil pricing now allows for resumption of pool development through additional drilling expected in H1 2022. In addition, planning is underway for the drilling of the Chef exploration well late in 2021. See "General Development of the Business – Fiscal Year Ended March 31, 2019", "General Development of the Business – Fiscal Year Ended March 31, 2020", "General Development of the Business – Fiscal Year Ended March 31, 2021" and "Statement of Reserves Data – Other Oil and Gas Information – Principal Properties".

ATP 732 Tookoonooka

An additional LWP for the final term of ATP 732 was lodged in fiscal Q2 of 2020 and approved by the regulator October 22, 2019. Work is ongoing towards finalizing three separate prospects and searching for a farm-in partner to share risk with Bengal.

See "*General Development of the Business – Fiscal Year Ended March 31, 2020*", "*General Development of the Business – Fiscal Year Ended March 31, 2021*", "*General Development of the Business – Fiscal Year Ended March 31, 2021*" and "*Statement of Reserves Data and Other Oil and Gas Information – Other Oil and Gas Information – Properties with No Attributable Reserves*".

ATP 934 Barrolka Permit

In 2016, Bengal completed the geological and geophysical interpretation of the permit with a total of five prospect areas identified. In 2017, additional in-depth technical work on existing 2D seismic, was concluded. This work involved an AVO/Inversion workflow, which identified trends that exhibit better Permian reservoir sand development. This work helped high-grade areas for potential 3D seismic acquisition and it is deemed to be integral to the de-risking process during a future drill location selection process.

During the final quarter of calendar 2019, Bengal filed a Special Amendment with the State of Queensland regulatory body, the regulatory authorities to reduce the Initial Work Program on ATP 934 for the period ending February 28, 2021. This application was subsequently approved on April 24, 2020. During 2020 Bengal filed an ATP Renewal and Relinquishment application. This application was approved and effective March 1, 2021 ATP 934 was renewed for a period of six years with the Later Work Program comprised of Geological and Geophysical studies and the drilling of up to four wells or three wells and 260 square kilometres of 3D seismic. One further relinquishment of 118 sub blocks (50%) is required by February 28, 2023.

ATP 934 now covers an area of 711 km² (175,692 acres).

In addition, planning for the drilling of the Santos farmin well at the LegBar Location continued with drilling planned in Q4 2021 at no cost to Bengal. The LegBar location is a drilling target in the Company's ATP 934 Southern Farmout Block.

See "*General Development of the Business – Fiscal Year Ended March 31, 2019*" and "*Statement of Reserves Data and Other Oil and Gas Information – Other Oil and Gas Information – Properties with No Attributable Reserves*".

PCA 155 Nubba/Yilgarn, (controlling permit ATP 752, Wompi -Block), Queensland, Australia The PCA 155 Nubba/Yilgarn, Wompi sub-block comprises 22,487 Gross acres (8,563 Net acres). On April 3, 2017 the PCA 155 for Nubba/ Yilgarn controlled by permit ATP 752 was granted by the regulatory authority of the Queensland government. This PCA allows a further 15 years to assess commerciality on the 30 sub-blocks granted. The Corporation performed no work on this permit during the fiscal year ended March 31, 2021.

The Corporation and its joint venture partners are planning to conduct an extended production test (EPT) on the Nubba gas discovery well. Initially planned for Q4 calendar 2019, the project is now delayed until there is certainty over a tie in point that can be accessed at a reasonable connection cost. Plans to tie in the well are subject to commercial flow rates and gas reserves being achieved, but otherwise not expected until 2022. The results of an EPT on the Nubba-1 well and subsequent reserves confirmation would have implications on any required appraisal on PCA 155 and whether the reserves from this well could justify commercialization on a standalone basis.

See "*General Development of the Business – Fiscal Year Ended March 31, 2021*" and "*Statement of Reserves Data and Other Oil and Gas Information – Other Oil and Gas Information – Properties with No Attributable Reserves*".

Production Estimates

The following tables disclose, by product type, the total volume of the Corporation's Gross production estimated by GLJ for the fiscal year ended March 31, 2021:

	Light Crude Oil and Medium Crude Oil (Bbls/d)	Heavy Crude Oil (Bbls/d)	Conventional Natural Gas (Mcf/d)	Natural Gas Liquids (Bbls/d)	BOE (BOE/d)	% Oil
From Gross Proved Reserves:						
Total	187	–	–	–	187	100
From Gross Proved plus Probable Reserves						
Total	190	–	–	–	190	100

Note:

- (1) The numbers in this table may not add due to rounding.

Production History

The following tables summarize certain information in respect of production, product prices received, royalties paid, production costs and resulting netback for the periods indicated below:

	Quarter Ended			
	2021	2020		
	31-Mar	31-Dec	30-Sep	30-Jun
AVERAGE DAILY PRODUCTION⁽¹⁾				
Light Crude Oil and Medium Crude Oil (Bbls/d)	202	211	231	238
Natural Gas Liquids (Bbls/d)	–	–	–	–
Conventional Natural Gas (Mcf/d)	–	–	–	–
Total (BOE/d)	202	211	231	238
AVERAGE PRICE RECEIVED (NET OF TRANSPORTATION)⁽³⁾				
Light Crude Oil and Medium Crude Oil (\$/Bbls)	87.86	65.52	59.30	50.84
Natural Gas Liquids (\$/Bbls)	–	–	–	–
Conventional Natural Gas (\$/Mcf)	–	–	–	–
Total (\$/BOE)	87.86	65.52	59.30	50.84
ROYALTIES PAID				
Light Crude Oil and Medium Crude Oil (\$/Bbls)	5.27	3.91	3.58	3.05
Natural Gas Liquids (\$/Bbls)	–	–	–	–
Conventional Natural Gas (\$/Mcf)	–	–	–	–
Total (\$/BOE)	5.27	3.91	3.58	3.05
PRODUCTION COSTS				
Light Crude Oil and Medium Crude Oil (\$/Bbls)	45.92	30.91	40.85	41.40
Natural Gas Liquids (\$/BOE)	–	–	–	–
Conventional Natural Gas (\$/BOE)	–	–	–	–
Total (\$/BOE)	45.92	30.91	40.85	41.40
NETBACK RECEIVED⁽⁴⁾⁽⁵⁾				
Light Crude Oil and Medium Crude Oil (\$/Bbls)	36.67	30.70	14.87	6.39
Natural Gas Liquids (\$/BOE)	–	–	–	–
Conventional Natural Gas (\$/BOE)	–	–	–	–
Total (\$/BOE)	36.67	30.70	14.87	6.39

Notes:

- (1) Conventional natural gas volumes are non-associated sales gas volumes.
- (2) The totals shown above may not match the corporate totals due to rounding.
- (3) Average price received does not include realized gain/loss on financial instruments.
- (4) Netback per BOE is calculated by dividing revenue (including realized gain/loss on financial instruments) less royalties, operating and transportation costs by the total production of Bengal measured in BOE
- (5) Netbacks for Q4 FY 2021 ended March 31, 2021 were seriously affected by the COVID-19 pandemic and declining benchmark oil prices. More details of the production costs can be found on pages 6 and 7 of the Corporation's management's discussion and analysis for the Q4 and fiscal year ended March 31, 2021.

The following table indicates Bengal's average daily production from its important field, and in total, for the year-ended March 31, 2021:

	Light Crude Oil and Medium Crude Oil (Bbls/d)	Heavy Crude Oil (Bbls/d)	Conventional Natural Gas (Mcf/d)	NGLs (Bbls/d)	BOE (BOE/d)
Total		–	–	–	
Australian Properties: Cuisinier	221	–	–	–	221

Note:

(1) Numbers may not add due to rounding.

The Corporation's production for the year ended March 31, 2021 was 100% light quality crude oil (32° API or greater).

For the twelve months ended March 31, 2021, approximately 100% of the Corporation's gross revenue was derived from light crude oil and medium crude oil production, 0% was derived from heavy crude oil production and 0% was derived from conventional natural gas and natural gas liquids production.

DIVIDEND POLICY

Bengal has not paid any dividends on any outstanding Bengal Shares. The board of directors of Bengal will determine the actual timing, payment and amount of dividends, if any, that may be paid by Bengal from time to time based upon, among other things, the cash flow, results of operations and financial condition of Bengal, the needs for funds to finance ongoing operations and any other business considerations that the board of directors of Bengal considers relevant.

DESCRIPTION OF CAPITAL STRUCTURE

Bengal is authorized to issue an unlimited number of Common Shares, of which 432,986,694 Common Shares are issued and outstanding as of the date hereof, and an unlimited number of Preferred Shares, of which none are issued and outstanding as of the date hereof. There are currently 13,716,667 options to purchase Common Shares outstanding with a weighted average exercise price of \$0.08, of which 2,376,667 options to purchase Common Shares are vested.

The holders of Common Shares are entitled to receive notice of, to attend and vote at any shareholder meetings of the Corporation, to receive such dividends declared by Bengal and to receive the remaining property of Bengal on dissolution after creditors of Bengal and holders of any Preferred Shares outstanding at the time have been satisfied.

The Preferred Shares are issuable in series, with each series consisting of such number of shares and having such rights, privileges, restrictions and conditions as may be determined by the board of directors prior to the issuance thereof. With respect to the payment of dividends and the distribution of assets in the event of liquidation, dissolution or winding-up of Bengal, whether voluntary or involuntary, the Preferred Shares are entitled to preference over the Common Shares and any other shares ranking junior to the preferred shares and may also be given such other preferences over the Common Shares and any other shares ranking junior to the Preferred Shares as may be determined at the time of creation of each series. The Preferred Shares do not have the right to vote at meetings of shareholders, except as may be provided for under applicable law.

MARKET FOR SECURITIES**Trading Price Volume**

The Bengal Shares are listed and posted for trading on the TSX under the symbol "BNG". The following sets forth the price range and trading volume of the Bengal Shares (as reported by the TSX) for the periods indicated.

Period	High (\$)	Low (\$)	Volume
2020			
March	0.065	0.02	785,670
April	0.05	0.015	1,427,071
May	0.055	0.025	1,614,769
June	0.055	0.04	634,600
July	0.055	0.035	903,714
August	0.06	0.045	683,375
September	0.05	0.03	882,907
October	0.04	0.025	682,934
November	0.035	0.025	549,009
December	0.035	0.025	2,013,333
2021			
January	0.06	0.03	1,653,891
February	0.075	0.05	2,290,323
March	0.14	0.055	4,527,674
April	0.085	0.07	574,621
May	0.085	0.07	1,031,236
June	0.14	0.08	2,375,400

Prior Sales

No securities of the Corporation were issued during the fiscal year ended March 31, 2021 that are not listed on the TSX (or any other stock exchange).

ESCROWED SECURITIES AND SECURITIES SUBJECT TO CONTRACTUAL RESTRICTION ON TRANSFER

To the knowledge of management of the Corporation, none of the securities of the Corporation are held in escrow or are subject to a contractual restriction on transfer as of the date hereof.

DIRECTORS AND OFFICERS

The names, municipalities of residence, positions with the Corporation, and principal occupation of the current directors and officers of the Corporation are set out below and in the case of directors, the period each has served as a director of the Corporation.

Name and Municipality of Residence	Office Held	Director Since	Principal Occupation During Last Five Years
Chayan Chakrabarty Calgary, Alberta, Canada	President, Chief Executive Officer and Director	February 13, 2008	Appointed Chief Executive Officer of Bengal on November 26, 2010. President of Bengal since February 13, 2008.
Ian J. Towers ⁽²⁾⁽³⁾ Calgary, Alberta, Canada	Director (Chairman)	November 24, 2005	Appointed Chief Operating Officer and Vice President Engineering at Acquisition Oil Corporation, a private oil and natural gas company, in March 2018. Prior thereto, independent businessman from April 2015 to March 2018. Prior thereto, President, Chief Executive Officer and a Director of Dolomite Energy Inc. from February 2005 to April 2015.
Peter D. Gaffney ⁽²⁾⁽³⁾ Alton, Hampshire, United Kingdom	Director	January 30, 2011	Independent advisor to international oil and natural gas industry. Director of Dominic Enterprises Ltd. from November 2005 to present. Director of Upfolds Ltd., a UK company, from September 2013 to August 2016.
James B. Howe ⁽¹⁾ Calgary, Alberta, Canada	Director	November 24, 2005	From January 1982 to present, President of Bragg Creek Financial Consultants Ltd. (a private financial consulting corporation). Director of Ensign Energy Services Inc. and Pason Systems Inc.
Brian Moss ⁽²⁾⁽³⁾ Calgary, Alberta, Canada	Director	January 6, 2012	Appointed President and Chief Executive Officer Crown Point Energy Inc. (formerly Crown Point Ventures Ltd.), a public oil and natural gas company, on November 9, 2016. Prior thereto, Executive Vice President and Chief Operating Officer of Crown Point Energy Corp. from June 2012 to November 2016. Director of Crown Point Energy Inc. from May 2012 to April 2015 and from December 2017 to present. Director of Acquisition Oil Corporation, a private oil and natural gas company from March 2018 to present.
Robert Steele ⁽¹⁾⁽³⁾ Calgary Alberta, Canada	Director	August 27, 2010	Independent businessman since March 2010. Prior thereto, a member of the board of directors of Raise Production Inc. (formerly Global Energy Services Ltd.) from June 2011 to October 2015.
William (Bill) Wheeler ⁽¹⁾ Vancouver, British Columbia, Canada	Director	January 6, 2012	Private investor. Director and President of Texada Capital Management Ltd., a private investment company, since September 2011. Co-founder of Leith Wheeler Investment Counsel.
Richard Edgar Calgary, Alberta, Canada	Executive Vice President	N/A	Executive Vice President of Bengal since September 2014. Director/President of Poplar Creek Resources Inc., an unlisted public company, since July 2009. Director of Shelton Canada Corporation from December 2009 to present.
Jerrad Blanchard Calgary, Alberta Canada	Chief Financial Officer	N/A	Appointed Chief Financial Officer March 8, 2021. Mr. Blanchard has over 15 years' experience in the oil and gas sector and has demonstrated expertise in all aspects of strategy, corporate finance, implementation of controls, financial reporting, and

Name and Municipality of Residence	Office Held	Director Since	Principal Occupation During Last Five Years
			governance. In addition to Bengal Energy Ltd., he has acted as Chief Financial Officer for Winstar Resources Ltd., a public international oil and gas exploration and production Company with operations in North Africa and Eastern Europe as well for Northern Silica Corporation, a mining Company with producing assets in Canada. Mr. Blanchard is a chartered professional accountant and began his career in the audit practice of PricewaterhouseCoopers with a focus on junior and international oil and gas exploration and production companies.

Notes:

- (1) Member of the Audit Committee.
- (2) Member of the Reserves Committee.
- (3) Member of the Compensation Committee.

The term of office of each director expires at the next annual meeting of shareholders of the Corporation.

As at June 29, 2021, 2021, the directors and executive officers of Bengal set forth above, as a group, beneficially owned, directly or indirectly, or exercised control or direction over, 368,282,708 Bengal Shares or approximately 85% of the issued and outstanding Bengal Shares, and 368,282,708 Bengal Shares or approximately 85% of the issued and outstanding Bengal Shares on a fully diluted basis (including the exercise of outstanding options to purchase Bengal Shares).

Cease Trade Orders, Bankruptcies, Penalties or Sanctions

Other than as disclosed herein, no director or executive officer of the Corporation: (i) is, or has been in the last 10 years, a director, chief executive officer or chief financial officer of an issuer (including the Corporation) that, (a) while that person was acting in that capacity was the subject of a cease trade order or similar order or an order that denied the issuer access to any exemptions under securities legislation, that was in effect for a period of more than 30 consecutive days (an "order"), (b) was subject to an order that was issued after the proposed director ceased to be a director, chief executive officer or chief financial officer and which resulted from an event that occurred while that person was acting in the capacity as director, chief executive officer or chief financial officer, (ii) is, or has been in the last 10 years, a director or executive officer of an issuer (including the Corporation) that while that person was acting in such capacity or within a year of that person ceasing to act in that capacity, became bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency or was subject to or instituted any proceedings, arrangement or compromise with creditors or had a receiver, receiver manager or trustee appointed to hold its assets; (iii) has, within the last 10 years, become bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency, or become subject to or instituted any proceedings, arrangements or compromises with creditors, or had a receiver, receiver manager or trustee appointed to hold his or her assets; or (iv) has been subject to: (a) any penalties or sanctions imposed by a court relating to securities legislation or by a securities regulatory authority or has entered into a settlement agreement with a securities regulatory authority, or (b) any other penalties or sanctions imposed by a court or regulatory body that would likely be considered important to a reasonable security holder in deciding whether to vote for a proposed director.

Mr. Edgar was a director and officer of Poplar Creek Resources Inc. when the company was subject to cease trade orders by the Alberta Securities Commission (the "ASC"), British Columbia Securities Commissions and Ontario Securities Commissions on May 9, 2014 for failure to file annual audited financial statements within the time frame allowed. Poplar Creek subsequently filed the required audited financial statements and MD&A and on September 24, 2019, the Alberta, BC and Ontario Securities Commissions issued a revocation order lifting the cease trade order.

Mr. Steele was a director of Gamet Resources Limited ("Gamet") when the company filed a Notice of Intention to File a Proposal under the BIA on March 17, 2016. The proposal of Gamet was approved by the Alberta Court of

Queen's Bench on September 28, 2016. Mr. Steele resigned as a director of Gamet on August 27, 2016.

Mr. Blanchard was the Chief Financial Officer of Northern Silica Corporation and director Heemskirk Mining Pty. Ltd., Heemskirk Canada Holdings Limited, Heemskirk Canada Limited, Custom Bulk Services Inc. and HCA Mountain Minerals (Moberly) Limited (collectively, the "**NSC Companies**") when the NSC Companies became subject to an initial order under the Companies' Creditors Arrangement Act (the "**CCAA**"). On November 23, 2020, the NSC Companies obtained a court order to terminate the CCAA proceedings that were commenced on June 30, 2020, by QMetco Limited and Taurus Resources No. 2 B.V., secured creditors of the NSC Companies (the "**Secured Creditors**"). On November 23, 2020 the Court ordered that the CCAA proceedings be terminated following the sale of all the the NSC Companies Assets to a related entity of the Secured Creditors under an approved sales and investment solicitation process.

AUDIT COMMITTEE INFORMATION

Audit Committee Mandate and Terms of Reference

The Mandate and Terms of Reference of the Audit Committee of the board of directors is attached hereto as Schedule "C".

Composition of the Audit Committee

The members of the Audit Committee are James Howe (Chairman), William (Bill) Wheeler and Robert Steele. The members of the Audit Committee are all independent (in accordance with National Instrument 52-110 — *Audit Committees*) and are financially literate. The following is a description of the education and experience of each member of the Audit Committee.

Mr. James Howe, Chairman

Mr. Howe is a Chartered Accountant and currently serves on the board of directors, including Audit Committees, for Ensign Energy Services Inc. (TSX: ESI) and Pason Systems Inc. (TSX: PSI) Mr. Howe graduated from the University of Western Ontario with a Bachelor of Arts (Honours) in Business Administration in 1973.

Mr. Robert Steele

Mr. Steele graduated with an Arts and Science degree in 1968 and a degree in Electrical Engineering both from the University of Saskatchewan in 1970. Mr. Steele is a professional engineer and independent businessman. He was a member of the board of directors of Raise Production Inc. (formerly Global Energy Services Ltd.) (TSXV: RPC) from June 2011 to October 2015.

Mr. William (Bill) Wheeler

Mr. Wheeler holds a Chartered Financial Analyst designation and received his Bachelor of Commerce degree from the University of British Columbia in 1970. Mr. Wheeler co-founded Leith Wheeler Investment Counsel in 1982. He also sits on the board of directors and is President of Texada Capital Management Ltd., a private investment company.

Pre-Approval of Policies and Procedures

Pursuant to the requirements of the Audit Committee Mandate and Terms of Reference, the Corporation has adopted policies and procedures with respect to the pre-approval of audit and permitted non-audit services as described in the Audit Committee Mandate and Terms of Reference as set forth in Schedule "C" attached hereto.

External Auditor Service Fees

	Financial Year Ending March 31, 2021	Financial Year Ending March 31, 2020
Audit Fees ⁽¹⁾	118,770	110,000
Audit Related Fees ⁽²⁾	0	-
Tax Fees ⁽³⁾	8,025	10,845
All Other Fees ⁽⁴⁾	-	-

Notes:

- (1) "Audit Fees" include fees necessary to perform the annual audit and quarterly reviews of the Corporation's consolidated financial statements. Audit Fees include fees for review of tax provisions and for accounting consultations on matters reflected in the financial statements. Audit Fees also include audit or other attest services required by legislation or regulation, such as comfort letters, consents, reviews of securities filings and statutory audits.
- (2) "Audit-Related Fees" include services that are traditionally performed by the auditor. These audit-related services include employee benefit audits, due diligence assistance, accounting consultations on proposed transactions, internal control reviews and audit or attest services not required by legislation or regulation.
- (3) "Tax Fees" include fees for all tax services other than those included in "Audit Fees" and "Audit-Related Fees". This category includes fees for tax compliance, tax planning and tax advice. Tax planning and tax advice includes assistance with tax audits and appeals, tax advice related to mergers and acquisitions, and requests for rulings or technical advice from tax authorities.
- (4) "All Other Fees" include all other non-audit services including the audit of a company acquired by the Corporation.

CONFLICTS OF INTEREST

The directors or officers of the Corporation may also be directors or officers of other oil and natural gas companies or otherwise involved in natural resource exploration and development and situations may arise where they are in a conflict of interest with the Corporation. Conflicts of interest, if any, which arise will be subject to and governed by procedures prescribed by the ABCA which require a director or officer of a corporation who is a party to, or is a director or an officer of or has a material interest in any person who is a party to, a material contract or proposed material contract with the Corporation disclose his or her interest and, in the case of directors, to refrain from voting on any matter in respect of such contract unless otherwise permitted under the ABCA.

HUMAN RESOURCES

As at March 31, 2021, Bengal employed 6 (six) full-time employees and 1 (one) part-time consultant at the head office. The Corporation also uses consulting services from a number of service providers on an as-needed basis. Bengal intends to add additional professional and administrative staff as the need arises.

AUDITORS, TRANSFER AGENT AND REGISTRAR

The auditors of the Corporation are KPMG LLP, Chartered Professional Accountants, Suite 3100, 205 – 5th Avenue S.W., Calgary, Alberta T2P 4B9.

Computershare Trust Company of Canada, at its principal offices in Calgary, Alberta and Toronto, Ontario, is the transfer agent and registrar of the Bengal Shares.

LEGAL PROCEEDINGS AND REGULATORY ACTIONS

There are no legal proceedings that Bengal is or was a party to, or that any of its property is or was a subject of, during the last completed financial year that were or are material to the Corporation, nor are any such material legal proceedings known to Bengal to be contemplated.

During the year ended March 31, 2021, there were no: (i) penalties or sanctions imposed against the Corporation by a court relating to securities legislation or by a securities regulatory authority; (ii) penalties or sanctions imposed by a court or regulatory body against the Corporation that would likely be considered important to a reasonable investor in making an investment decision; or (iii) settlement agreements the Corporation entered into with a court relating to securities legislation or with a securities regulatory authority.

INTEREST OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

Other than as set forth herein, there were no material interests, direct or indirect, of directors or executive officers of the Corporation, of any shareholder who beneficially owns or controls or directs, directly or indirectly, more than 10% of the outstanding voting securities of the Corporation, or any known associate or affiliate of such persons, in any transaction within the three most recently completed financial years or during the current financial year that has materially affected or is reasonably expected to materially affect the Corporation or any of its subsidiaries.

Mr. Wheeler currently owns, directly or indirectly, or exercises control or direction over 357,611,489 Common Shares, representing approximately 82.6% of the total issued and outstanding Bengal Shares as at the date of this Annual Information Form.

MATERIAL CONTRACTS

Except for contracts entered into in the ordinary course of business (unless otherwise required by applicable securities requirements to be disclosed), neither the Corporation nor any of its subsidiaries has entered into any material contracts within the most recently completed financial year, or before the most recently completed financial year which are still in effect.

INTERESTS OF EXPERTS

There is no person or company whose profession or business gives authority to a statement made by such person or company and who is named as having prepared or certified a statement, report or valuation described or included in a filing, or referred to in a filing, made under NI 51-102 by the Corporation during, or related to, the Corporation's most recently completed financial year other than GLJ, the Corporation's independent engineering evaluators, and KPMG LLP, the Corporation's auditors. None of the "designated professionals" (as defined in Item 16.2(1.1) of Form 51-102F2 of NI 51-102) of GLJ have or are to receive any registered or beneficial interest, direct or indirect, in any of Bengal's securities or other property of Bengal or of Bengal's associates or affiliates, either at the time GLJ prepared the report, valuation, statement or opinion or any time thereafter. KPMG LLP are the auditors of the Corporation and have confirmed that they are independent with respect to the Corporation within the meaning of the relevant rules and related interpretations prescribed by the relevant professional bodies in Canada and any applicable legislation or regulations.

In addition, none of the aforementioned persons or companies, nor any director, officer or employee of any of the aforementioned persons or companies, is or is expected to be elected, appointed or employed as a director, officer or employee of the Corporation or of any associate or affiliate of the Corporation.

INDUSTRY CONDITIONS

Companies operating in the oil and natural gas industry are subject to extensive regulation and control of operations (including land tenure, exploration, development, production, refining and upgrading, transportation, and marketing) as a result of legislation enacted by various levels of government, as well as with respect to the pricing and taxation of oil and natural gas, including the governments of Canada, and foreign countries, such as Australia, all of which

investors in the oil and natural gas industry should carefully consider. All current legislation is a matter of public record and the Corporation is unable to predict what additional legislation or amendments governments may enact in the future. The following comprises some of the principal aspects of legislation, regulations and agreements governing the oil and natural gas industry in Australia.

Pricing and Marketing

There is a free market for oil, condensate and liquid petroleum gas in Australia. As a result, there are no price controls and export or import approvals are not applied. Markets for oil and condensate exist in Australia and low-sulphur light crude oil finds a ready domestic and overseas market. Gas is typically traded in long term gas sales agreements. The gas distribution sector is dominated by two main participants forming natural monopolies: APA Group and Jemena serving the East Coast. The buyers are typically power generating utilities and Chemical & Industrial users.

Royalties and Incentives

In Australia, taxes are payable to the Federal Government and royalties are also payable to the government of the State in which production is taking place. The principal federal taxes potentially applicable are Income Tax and the recently introduced "Petroleum Resource Rent Tax" ("**PRRT**"). The general income tax rate applying to corporations is 30% of taxable income where income of the Corporation is subject to the Australian tax regime. Beginning July 1, 2012, PRRT became applicable to all Australian onshore and offshore oil and natural gas projects, including coal seam gas and oil shale projects. PRRT is payable at a rate of 40% of a project's taxable profit which is determined after deducting certain project expenses (including exploration and drilling costs). PRRT payments are deductible for income tax purposes. Credits also apply for current State royalties paid by a corporation and native title compensation. Due to significant deductions available it is generally anticipated that it would be many years into the life of a project before PRRT becomes payable. Depending on the circumstances, an excise licence and excise duty may apply to exports of oil once a threshold of 30 MM bbls is reached and if then exceed 3 MM bbls annually. A credit is allowed for the purposes of PRRT. From 1st July 2019, PRRT does no longer apply to onshore projects in Australia.

The royalty previously imposed by State governments on oil and natural gas production in Australia was 12.5% of the wellhead value. However, due to changes implemented by the Queensland Government in 2020, from October 1, 2020, royalties are calculated based on a tiered royalty rate to the volume of petroleum produced. Under the volume model, royalties are calculated by applying a prescribed rate to the volume of liable petroleum produced during a return period. There are different rates depending on the class of petroleum (i.e domestic gas, supply gas, project gas or liquid petroleum). A penalty of 75% of any understated liability will be imposed if a royalty is calculated incorrectly.

In onshore areas that are affected by native title (which has been recognised since the mid-1990s) additional compensation may be payable to recognized indigenous Australian title holders. This compensation is negotiable and generally varies from project to project. Compensation may be payable as a lump sum, by payments over time or in the form of a royalty. Native title holders do not own petroleum. Compensation payments relate to the impact of activities on traditional Indigenous rights. Compensation is typically negotiated on a good faith basis at the beginning of a project. The Courts may determine compensation if parties cannot agree or in limited circumstances may determine that a project may not proceed without the consent of native title holders.

In Australia, landholders are also entitled to compensation for the impacts of exploration or drilling activities on their land (for example, impacts on farming or grazing). Landholders do not own petroleum and are not entitled to a royalty on this basis. Compensation may be determined by the Courts if landholders and a petroleum tenement holder are not able to agree.

Land Tenure

Amendments to Queensland resources legislation were proposed by the Natural Resources and Other Legislation Amendment Bill 2019 ("**NROLA Bill**"), with key changes to affect industry's management of petroleum exploration tenure. On May 15, 2019, the Natural Resources and Other Legislation Amendment Act 2019 ("**NROLA Act**") was passed by Parliament.

The key amendments to the Mineral Resources Act 1989 ("**MRA**"), Mineral and Energy Resources (Common Provisions) Act 2014 ("**MERCPA**") and the Petroleum and Gas (Production and Safety) Act 2004 ("**PG Act**") that affect aspects of the management of petroleum exploration tenements are detailed below.

Work programs for Authorities To Prospect

Work programs for Authorities To Prospect ("ATP") will now be either activities-based or outcomes-based, depending on the nature of the tenure.

Activities-based programs will generally remain as per the current requirements for work programs. However, outcomes-based programs are a new concept (intended to provide flexibility to the tenure holder) and must detail four components:

- the outcomes proposed to be pursued during the term;
- the strategy for pursuing the outcomes;
- the information and data proposed to be collected as an indication of mineralisation during the term; and
- the existing requirement to provide the estimated human, technical and financial resources proposed to be committed during the term.

The explanatory notes published with respect to the NROLA Bill indicate that outcomes-based work programs will generally be accepted for non-competitive-tender applications (subject to some exceptions), with activities-based programs generally being the default position for competitive tenders. However, even for competitive tenders, a call for tender may specify that the tender is required to be accompanied by an outcomes-based work program (for example, where it is greenfield site).

Relinquishment of ATPs

The NROLA Act streamlines the relinquishment requirements of ATPs by reducing the frequency of relinquishment.

ATPs

The relinquishment requirements for ATPs have been amended from 8.33% per year to 50% by the "relinquishment day" (being the day before the 6th anniversary of the day the ATP took effect). This applies to ATPs granted after May 25, 2020. ATPs existing prior to the amendments are not affected by these changes.

Variation of conditions of ATPs

A new provision was inserted into the MRA and the PAG Act enabling the Minister to amend the conditions of an ATP at any time (without application by, or seeking the views of, the holder). This power may be exercised by the Minister if exceptional events apply. It applies to ATPs granted both before and after the commencement of the amendments. An exceptional event as defined in the MRA means an event that: (i) affects the carrying out of authorised activities under the permit; (ii) is beyond the control of the holder of the permit; and (iii) could not reasonably have been prevented by the holder of the permit. An exceptional event does not include a takeover bid under the Corporations Act 2001 (Cth), Chapter 6 made or proposed by another entity in relation to the holder of the permit. The PAG Act contains an almost identical definition.

The NROLA Act also limits the grounds of an ATP holder to apply for a special amendment of conditions (in the case of an ATPs). Such applications may now only be made where there is an exceptional event or where the relevant ATP is part of an exploration project. An exploration project as defined in the PAG Act means a project involving 2 or more authorities to prospect that have a unifying exploration purpose.

The amendments also limit the circumstances in which an extension to the period of a work program for an ATP will be granted.

Other amendments from the NROLA Act include:

Rehabilitation and environmental management: MERCPA was amended to clarify that all resource authority holders may access public and private land to carry out rehabilitation and environmental management activities required under the Environmental Protection Act 1994.

Remove area limit for PCA and PL and enable amalgamation: The amendments remove the 75 sub-block area limit for a PCA or PL, and enable applications to be made to amalgamate multiple PCAs or multiple PLs.

What happens next?

For the most part, mineral ownership in Australia is governed by the respective state governments who grant tenements for the exploration of petroleum and natural gas. While not exactly the same, largely the process from state to state is similar. Oil and natural gas companies typically submit applications to the applicable state government for exploration permits or an ATP in response to invitations to bid made in government gazettals (onshore and offshore). Within the applications, companies outline a schedule of work programs which include both an estimate of the financial commitments to be spent on the property(s) year over year along with a certain amount of seismic and/or exploration wells to be drilled. Depending on the location of the permit, state governments will award the permits subject to the Corporation successfully negotiating native title agreements with Indigenous surface owners. After a successfully negotiated native title agreement, the Corporation is then formally granted the ATP or exploration permit in Queensland or PEL in South Australia by the State. The permits typically provide the Corporation with at least four (4) years, and in some States, up to a maximum of 12 years to conduct its proposed work program with the opportunity for potential extensions. Recent changes to the Petroleum and Gas Act announced by the Queensland State Government on May 28, 2014 may extend onshore ATP work permits by two years to six years. Generally, each state government will reserve unto itself a royalty when production commences which runs with the life of the relevant Production Licence. It should also be noted that for each ATP or exploration permit issued there is a minimum work program which the applicable state authority expects to be met or exceeded. If the minimum work commitment set forth in the work program is not completed then there is a risk that the ATP or exploration permit is terminated. In most States a small amount is payable by way of annual fee or rent. Failure to pay may also result in termination.

In most cases ATP's held by the Corporation are granted for a period of twelve years. All phases of the oil and natural gas exploration, development and production activities are regulated in varying degrees by the Australian regulatory authorities. Where the ATP has an initial term of twelve years, this period may be subdivided into three, four year periods. During the first four year period, work commitments are completed and at the end of the period one third of the land that was originally granted must be relinquished back to the state. Following such relinquishment the next four year period commences and at the end of the last period remaining land must be relinquished. Alternatively, for ATPs existing prior to the amendments, the conditions of an ATP may require relinquishment of 8.33% of area per year over a 12 year period. Generally at the end of the twelfth year, all of the land will have been relinquished that has not been a part of a commercial discovery. Commercial discoveries are held under 'Production Licences' which are exempt from relinquishment and stay active until final field abandonment or the end of the specified term of the Production Licence (generally 30 years). For ATPs granted after May 25, 2020, relinquishment of 50% of the original notional sub-blocks is required by the end of year six.

Queensland – PCAs

Another feature of the land tenure system in Queensland is that as an ATP reaches the end of its term, an application can be made to have an area of the ATP declared as a PCA so that the holder can evaluate the potential production and market opportunities for the estimated resource.

The PCA is a way of retaining an area of an ATP beyond its term to provide extra time to commercialise the estimated resource. The maximum term for an ATP is 12 years, while the application for the declaration for the PCA can be for up to 15 years.

A PCA application must include a commercial viability report that shows that the area is likely to be commercially viable within 15 years. The application must also include an evaluation program showing how the holder will overcome any factors inhibiting the commercial viability of the project.

When an area is declared as a PCA, it remains part of the ATP. When the PCA expires, the declared area ceases to be part of the original ATP.

Regulatory Authorities and Environmental Regulation

Bengal's Environment Authorities ("EAs") are subject to the provisions of the *Environmental Protection Act 1994* (Qld) ("EP Act"). While the regulations made under the EP Act were updated in 2019, they remain in substantially similar form to the existing legislation and the amendments to the regulations incorporate current drafting practices and the effective operation of the EP Act.

No recent legislative changes have occurred to the EA Act that change the scope of the activities authorized. Management is satisfied that no material breaches of the environmental legislation have occurred with respect to any of the Corporation's properties. No notices of any material breaches have been received from any authority by the Corporation.

Further, on February 29, 2014 and January 1, 2015, certain changes to the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (the "**Environment Regulations**") came into effect in Australia. The February 28, 2014 amendments to the Environment Regulations incorporate changes necessary for the National Offshore Petroleum Safety and Environmental Management Authority ("**NOPSEMA**") to retain the environmental safeguards of the *Environmental Protection and Biodiversity Conservation Act 1999* and provide: (i) clarified environmental assessment and implementation strategy requirements for environment plan submissions; (ii) clarified and strengthened environmental performance and incident reporting requirements; (iii) strengthened duties and responsibilities of the titleholder; and (iv) requirements for 'offshore project proposal' submissions for new large scale development projects in Commonwealth waters. One specific amendment was the change from the "operator" being responsible for compliance with Environment Regulations, to the "titleholder".

The January 1, 2015 changes reflect the Australian Government's response to the June 2010 Report of the Montara Commission of Inquiry, including amendments to the Offshore Petroleum and Greenhouse Gas Storage Act 2006 (the "**OPGGS Act**") to strengthen and clarify the responsibilities of titleholders undertaking petroleum activities.

Amendments to the OPGGS Act became effective on November 29, 2013. For petroleum titles the previous requirement to hold insurance was broadened by the amendments to require titleholders to maintain sufficient financial assurance to meet the costs, expenses and liabilities that may arise in connection with carrying out petroleum activities among other things. From January 1, 2015, the Environment Regulations also provide that the NOPSEMA must be reasonably satisfied that a titleholder is compliant with certain provisions of the OPGGS Act prior to accepting an environment plan ("EP") or revised EP that was submitted on or after January 1, 2015.

Changes to the OPGGS Act came into effect through the *Offshore Petroleum and Greenhouse Gas Storage Amendment (Miscellaneous Amendments) Act 2019* (Cth). Relevantly, the changes:

- a) strengthen NOPSEMA's investigative and enforcement powers; and
- b) formally transfer various regulatory functions from the Minister to NOPSEMA (which NOPSEMA had already been exercising under delegation from the Minister).

The practical effect of these amendments on Bengal's operations is minimal, and the amendments largely relate to providing NOPSEMA with greater investigatory and other powers, and a wider array of enforcement tools, including penalties and enforceable undertakings.

In addition, the *Offshore Petroleum and Greenhouse Gas Storage Amendment (Cross-Boundary Greenhouse Gas Titles and Other Measures) Act 2020* (Cth) amends the OPGGS Act to enable title administration and regulation of a greenhouse gas storage formation that straddles the boundary between state and Northern Territory coastal waters and Commonwealth waters. This bill seek to allow for cross-boundary single gas titles, particularly from state and territory coastal waters to Commonwealth waters. This will unify two greenhouse gas titles where a titleholder has reasonable grounds to suspect that there is a geological formation that sits on either side of two title areas, and allow the Commonwealth to facilitate this through a cross-boundary authority.

Effective April 27, 2016, the Queensland Parliament significantly broadened the reach of its environmental law by

passing the *Environmental Protection (Chain of Responsibility) Amendment Act 2016* (the "Act"). The Act was introduced to compel responsible persons connected to corporations in financial distress to meet environmental responsibilities. The Act amends the *Environmental Protection Act 1994* (Qld) to empower the Queensland Department of Environment and Science ("DES") to issue related persons of the Operators with environmental protection orders ("EPO") and cost recovery notices.

An EPO may require the related person to: take action to prevent or minimize the risk of environmental harm, rehabilitate or restore land because of environmental harm or give the DES a bank guarantee or other form of security to secure the related person's compliance with the EPO. A failure to comply with an EPO is a criminal offence punishable by a fine. If the non-compliance is willful, a prison sentence may also be imposed. Additionally, breach of an EPO will enable the DEHP to step in and remediate a site, and then recover its rehabilitation costs from the EPO recipient.

The Act also confers power on the DES to require the provision of a financial assurance or bond in circumstances where an Operator proposes transferring an environmental authority it holds to another entity.

The Act seeks to maintain accountability for damaging environmental practices. Any person or entity with a connection to a company ("**Operator**") that carries out environmentally relevant activities in Queensland, should consider the risk liability posed by the Act.

Bengal is not aware of any negative or positive effects environmental regulations will have on its activities.

Liability Management Rating Programs

Queensland, Australia

The *Mineral and Resources (Financial Provisioning) Act 2018* (Qld) came into force on 1 April 2019, which replaced existing financial assurance arrangements for resource activities under the EP Act have been with the Financial Provisioning Scheme. The Financial Provisioning Scheme imposes an automatic Estimated Rehabilitation Cost (ERC) condition on all EAs (replacing existing financial assurance requirements). The ERC figure is based on the likely costs and expenses that the Queensland Government may incur for rehabilitating or managing disturbance of the land.

The Scheme is administered by the Scheme Manager, a statutory officer supported by Queensland Treasury.

The purpose of the Scheme is to improve the State's management of its financial risk in the event holders of a resource activity environmental authority (holders) or small scale mining tenure ("**SSMT**") fail to comply with their environmental management and rehabilitation obligations. Over time, the scheme will also provide funds to support rehabilitation of abandoned mines and expand research into mine rehabilitation.

The scheme manager is responsible for administering all SSMT and holders' financial provisioning on behalf of the State of Queensland. To enable this, all holders and SSMT financial assurance (called surety in the Act) held by the DES and the Department of Natural Resources and Mines ("**DNRME**") were transferred to the Scheme from 1 April 2019.

Under the Scheme:

SSMTs and holders with an ERC below \$100,000 will continue providing surety and will not be part of the annual risk category assessment process; landholders with an ERC of at least \$100,000 will be transitioned across to the Scheme Manager risk category assessment process over three years (from 1 April 2019). The assessment process will determine whether the holder will be required to provide a contribution to the Scheme's financial

provisioning fund and/or to provide surety to the Scheme Manager (all existing financial assurance is taken to be surety given under the Act). The *Environmental Protection and Other Legislation Amendment Act 2020* (Qld) also amended the EP Act in relation to rehabilitation and post-surrender obligations. Notably, a holder may now be required to make a residual risk payment into the residual risk fund to ensure that any ongoing management or remediation of

the site will be covered, after the financial assurance (or security deposit) provided to the Scheme has been returned and the Environmental Authority has been surrendered by the holder. The residual risk payment is intended to cover the likely costs and expenses incurred by the Department to manage and remediate the resource activity after financial assurance has been returned.

Climate Change Regulation

Climate change regulation at both the federal and state level in Australia has the potential to significantly affect the regulatory environment of the oil and natural gas industry. Any new laws and regulations, or additional requirements to existing laws and regulations, could have a material impact on the Corporation's operations and cash flow.

On July 17, 2014, the carbon tax repeal legislation received the Royal Assent, abolishing the carbon pricing mechanism effective July 1, 2014. As a result, no new carbon tax liabilities will be incurred from July 1, 2014. However, no carbon tax liabilities that were incurred before June 30, 2014 will be removed.

On June 18, 2014, the *Carbon Farming Initiative Amendment Bill 2014* was introduced into Parliament and it received Royal Assent on November 24, 2014. The legislation establishes the Emissions Reduction Fund to replace the carbon tax and provide a transition for the Carbon Farming Initiative by amending the: *Carbon Credits (Carbon Farming Initiative) Act 2011* to: provide for the Clean Energy Regulator to conduct auctions and enter into contracts to purchase emissions reductions; enable a broader range of emissions reduction projects to be approved; and amend the project eligibility criteria and processes for approving projects and crediting carbon credit units; and *Australian National Registry of Emissions Units Act 2011*, *Clean Energy Regulator Act 2011* and *National Greenhouse Energy and Reporting Act 2007* to make consequential amendments. As of December 12, 2014, the Carbon Farming Initiative has been integrated with the Emissions Reduction Fund.

The objective of the Emissions Reduction Fund is to help Australia to meet its emissions reduction target of twenty-six to twenty-eight percent below 2005 levels by 2030. The Emissions Reduction Fund will build on the Carbon Farming Initiative by offering emissions reduction opportunities to a range of sources beyond the land sector. Through the Emissions Reduction Fund auction arrangements, the Australian Government will purchase Australian carbon credit units ("ACCUs") from existing Carbon Farming Initiative projects that are competitive at an auction. This will allow existing participants in the Carbon Farming Initiative to secure a return from eligible projects.

RISK FACTORS

Investors should carefully consider the risk factors set out below and consider all other information contained herein and in the Corporation's other public filings before making an investment decision. The risks set out below are not an exhaustive list and should not be taken as a complete summary or description of all the risks associated with the Corporation's business and the oil and natural gas business generally.

Exploration, Development and Production Risks

The Corporation's future performance may be affected by the financial, operational, environmental and safety risks associated with the exploration, development and production of oil and natural gas

Oil and natural gas operations involve many risks that even a combination of experience, knowledge and careful evaluation may not be able to overcome. The long term commercial success of the Corporation depends on its ability to find, acquire, develop and commercially produce oil and natural gas reserves. Without the continual addition of new reserves, the Corporation's existing reserves, and the production from them, will decline over time as the Corporation produces from such reserves. A future increase in the Corporation's reserves will depend on both the ability of the Corporation to explore and develop its existing properties and its ability to select and acquire suitable producing properties or prospects. There is no assurance that the Corporation will be able to continue to find satisfactory properties to acquire or participate in. Moreover, management of the Corporation may determine that current markets, terms of acquisition, participation or pricing conditions make potential acquisitions or participation uneconomic. There is also no assurance that the Corporation will discover or acquire further commercial quantities of oil and natural gas.

Future oil and natural gas exploration may involve unprofitable efforts from dry wells or from wells that are productive but do not produce sufficient petroleum substances to return a profit after drilling, completing (including hydraulic fracturing), operating and other costs. Completion of a well does not ensure a profit on the investment or recovery of drilling, completion and operating costs.

Drilling hazards, environmental damage and various field operating conditions could greatly increase the cost of operations and adversely affect the production from successful wells. Field operating conditions include, but are not limited to, delays in obtaining governmental approvals or consents, shut ins of wells resulting from extreme weather conditions, insufficient storage or transportation capacity or geological and mechanical conditions. While diligent well supervision, effective maintenance operations and the development of enhanced oil recovery technologies can contribute to maximizing production rates over time, it is not possible to eliminate production delays and declines from normal field operating conditions, which can negatively affect revenue and cash flow levels to varying degrees.

Oil and natural gas exploration, development and production operations are subject to all the risks and hazards typically associated with such operations, including, but not limited to, fire, explosion, blowouts, cratering, sour gas releases, spills and other environmental hazards. These typical risks and hazards could result in substantial damage to oil and natural gas wells, production facilities, other property and the environment and cause personal injury or threaten wildlife. Particularly, the Corporation may explore for and produce sour gas in certain areas. An unintentional leak of sour gas could result in personal injury, loss of life or damage to property and may necessitate an evacuation of populated areas, all of which could result in liability to the Corporation.

Oil and natural gas production operations are also subject to geological and seismic risks, including encountering unexpected formations or pressures, premature decline of reservoirs and the invasion of water into producing formations. Losses resulting from the occurrence of any of these risks may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects.

As is standard industry practice, the Corporation is not fully insured against all risks, nor are all risks insurable. Although the Corporation maintains liability insurance, **business interruption insurance, control of well insurance and Director and Officer insurance** in an amount that it considers consistent with industry practice, liabilities associated with certain risks could exceed policy limits or not be covered. See "*Risk Factors – Insurance*". In either event, the Corporation could incur significant costs.

Bengal attempts to minimize exploration, development and production risks by utilizing a high-end technical team with extensive experience and multidisciplinary skill sets to assure the highest probability of success in its drilling efforts. Bengal's collaboration of a team of seasoned veterans in the oil and natural gas business, each with a unique expertise in the various upstream to downstream technical disciplines of prospect generation to operations, provides the best assurance of competency, risk management and drilling success. Bengal carefully selects its contractors to execute drilling, completion, engineering and construction as well as operational activities to ensure that value is maximised. A full cycle economic model is utilized to evaluate all hydrocarbon prospects. Detailed geological and geophysical techniques are regularly employed including 3D seismic, petrography, sedimentology, petrophysical log analysis and regional geological evaluation.

Weakness and Volatility in the Oil and Natural Gas Industry

Weakness and volatility in the market conditions for the oil and natural gas industry may affect the value of the Corporation's reserves, restrict its cash flow and its ability to access capital to fund the development of its properties

Recent market events and conditions, including global excess oil and natural gas supply, the ongoing coronavirus disease ("**COVID-19**") pandemic, actions taken by the Organization of the Petroleum Exporting Countries ("**OPEC**"), sanctions against Iran and Venezuela, slowing growth in China and emerging economies, market volatility and disruptions in Asia, weakened global relationships, isolationist trade policies, increased U.S. shale production, sovereign debt levels and political upheavals in various countries, including a growing anti-hydrocarbon sentiment, have caused significant volatility in commodity prices. See "*Risk Factors – Political Uncertainty*" and "*Risk Factors – Impact of Pandemics*". These events and conditions have caused a significant decrease in the valuation of oil and natural gas companies and a decrease in confidence in the oil and natural gas industry. These difficulties have been

exacerbated by political and other actions resulting in uncertainty surrounding regulatory, tax, royalty changes and environmental regulation. See "*Industry Conditions – Royalties and Incentives*", "*Industry Conditions – Regulatory Authorities and Environmental Regulation*" and "*Industry Conditions – Climate Change Regulation*".

Lower commodity prices may also affect the volume and value of the Corporation's reserves, rendering certain reserves uneconomic. In addition, lower commodity prices restrict the Corporation's cash flow resulting in less funds from operations being available to fund the Corporation's capital expenditure budget. Consequently, the Corporation may not be able to replace its production with additional reserves and both the Corporation's production and reserves could be reduced on a year-over-year basis. See "*Risk Factors – Credit Facilities*". Any decrease in value of the Corporation's reserves may reduce the borrowing base under its credit facilities, which, depending on the level of the Corporation's indebtedness, could result in the Corporation having to repay a portion of its indebtedness. See "*Risk Factors – Credit Facilities*". In addition to possibly resulting in a decrease in the value of the Corporation's economically recoverable reserves, lower commodity prices may also result in a decrease in the value of the Corporation's infrastructure and facilities, all of which could also have the effect of requiring a write down of the carrying value of the Corporation's oil and natural gas assets on its balance sheet and the recognition of an impairment charge in its income statement. Given the current market conditions, the Corporation may have difficulty raising additional funds or if it is able to do so, it may be on unfavourable and highly dilutive terms See "*Risk Factors – Additional Funding Requirements*". If these conditions persist, the Corporation's cash flow may not be sufficient to continue to fund its operations and to satisfy its obligations when due and the Corporation's ability to continue as a going concern and discharge its obligations will require additional equity or debt financing and/or proceeds or reduction in liabilities from asset sales. There can be no assurance that such equity or debt financing will be available on terms that are satisfactory to the Corporation or at all. Similarly, there can be no assurance that the Corporation will be able to realize any or sufficient proceeds or reduction in liabilities from asset sales to discharge its obligations and continue as a going concern.

Risks Associated with Foreign Operations

There are significant risks associated with carrying on foreign operations

International operations are subject to political, economic and other uncertainties, including, among others, risk of war, risk of terrorist activities, border disputes, expropriation, renegotiations or modification of existing contracts, restrictions on repatriation of funds, import, export and transportation regulations and tariffs, taxation policies, including royalty and tax increases and retroactive tax claims, exchange controls, limits on allowable levels of production, currency fluctuations, labor disputes, sudden changes in laws, government control over domestic oil and natural gas pricing and other uncertainties arising out of foreign government sovereignty over the Corporation's international operations. With respect to taxation matters, the governments and other regulatory agencies in the foreign jurisdictions in which Bengal operates and intends to operate in the future may make sudden changes in laws relating to taxation or impose higher tax rates, which may affect the Corporation's operations in a significant manner. These governments and agencies may not allow certain deductions in calculating tax payable that Bengal believes should be deductible under applicable laws or may have differing views as to values of transferred properties. This can result in significantly higher tax payable than initially anticipated by Bengal. In many circumstances, readjustments to tax payable imposed by these governments and agencies may occur years after the initial tax amounts were paid by Bengal, which can result in the Corporation having to pay significant penalties and fines. Furthermore, in the event of a dispute arising from international operations, the Corporation may be subject to the exclusive jurisdiction of foreign courts or may not be successful in subjecting foreign persons to the jurisdiction of courts in Canada.

Impact of Pandemics

The COVID-19 pandemic may effect the Corporation's results, business, financial conditions or liquidity

Pandemics, epidemics or outbreaks of an infectious disease in Canada or worldwide, including COVID-19, Middle East Respiratory Syndrome, Severe Acute Respiratory Syndrome, H1N1 influenza virus, avian flu or any other similar illnesses could have an adverse impact on the Corporation's results, business, financial condition or liquidity.

On March 11, 2020, the World Health Organization declared the outbreak of a strain of novel coronavirus disease, COVID-19, a global pandemic. The COVID-19 pandemic has negatively impacted the Canadian, U.S., Australian and global economies; disrupted Canadian, U.S., Australian and global supply chains; disrupted financial markets; contributed to a decrease in interest rates; resulted in ratings downgrades, credit deterioration and defaults in many industries; forced the closure of many businesses, led to loss of revenues, increased unemployment and bankruptcies; and necessitated the imposition of quarantines, physical distancing, business closures, travel restrictions, and sheltering-in-place requirements in Canada, the U.S., and other countries including Australia. If the pandemic is prolonged, including through subsequent waves, or if additional variants of COVID-19 emerge which are more transmissible or cause more severe disease, or if other diseases emerge with similar effects, the adverse impact on the economy could worsen. Moreover, it remains uncertain how the macroeconomic environment, and societal and business norms will be impacted following this COVID-19 pandemic. Unexpected developments in financial markets, regulatory environments, or consumer behaviour may also have adverse impacts on the Corporation's results, business, financial condition or liquidity, for a substantial period of time.

The Corporation's business, financial condition, results of operations, cash flows, reputation, access to capital, cost of borrowing, access to liquidity, and/or business plans may, in particular, and without limitation, be adversely impacted as a result of the pandemic and/or decline in commodity prices as a result of:

- the shut-down of facilities or the delay or suspension of work on major capital projects due to workforce disruption or labour shortages caused by workers becoming infected with COVID-19, or government or health authority mandated restrictions on travel by workers or closure of facilities or worksites;
- suppliers and third-party vendors experiencing similar workforce disruption or being ordered to cease operations;
- reduced cash flows resulting in less funds from operations being available to fund capital expenditure budgets;
- reduced commodity prices resulting in a reduction in the volumes and value of reserves;
- crude oil storage constraints resulting in the curtailment or shutting in of production;
- counterparties being unable to fulfill their contractual obligations on a timely basis or at all;
- the inability to deliver products to customers or otherwise get products to market caused by border restrictions, road or port closures or pipeline shut-ins, including as a result of pipeline companies suffering workforce disruptions or otherwise being unable to continue to operate; and
- the ability to obtain additional capital including, but not limited to, debt and equity financing being adversely impacted as a result of unpredictable financial markets, commodity prices and/or a change in market fundamentals.

The COVID-19 pandemic has also created additional operational risks for the Corporation, including the need to provide enhanced safety measures for its employees and customers; comply with rapidly changing regulatory guidance; address the risk of, attempted fraudulent activity and cybersecurity threat behaviour; and protect the integrity and functionality of the Corporation's systems, networks, and data as the majority of employees work remotely. The Corporation is also exposed to human capital risks due to issues related to health and safety matters, and other environmental stressors as a result of measures implemented in response to the COVID-19 pandemic, as well as the potential for a significant proportion of the Corporation's employees, including key executives, to be unable to work effectively, because of illness, quarantines, sheltering-in-place arrangements, government actions or other restrictions in connection with the pandemic.

The extent to which the COVID-19 pandemic continues to impact the Corporation's results, business, financial condition or liquidity will depend on future developments in Canada, the U.S., Australia and globally, including the development and widespread availability of efficient and accurate testing options, and effective treatment options or vaccines. Despite the approval of certain vaccines by the regulatory bodies in Canada, the U.S. and other countries including Australia, the ongoing evolution of the development and distribution of an effective vaccine also continues to raise uncertainty.

Prices, Markets and Marketing

Various factors may adversely impact the marketability of oil and natural gas, affecting net production revenue,

production volumes and development and exploration activities

The Corporation's ability to market its oil and natural gas may depend upon its ability to acquire capacity in pipelines that deliver oil, NGLs and natural gas to commercial markets or contract for the delivery of crude oil and NGLs by rail. Numerous factors beyond the Corporation's control do, and will continue to, affect the marketability and price of oil and natural gas acquired, produced, or discovered by the Corporation, including:

- deliverability uncertainties related to the distance the Corporation's reserves are from pipelines, railway lines and processing and storage facilities;
- operational problems affecting pipelines, railway lines and processing and storage facilities; and
- government regulation relating to prices, taxes, royalties, land tenure, allowable production and the export of oil and natural gas.

Oil and natural gas prices are expected to remain volatile for the near future because of market uncertainties over the supply and demand of these commodities due to the current state of the world economies, the ongoing COVID-19 pandemic, shale oil production in the United States, OPEC actions, political uncertainties, sanctions imposed on certain oil producing nations by other countries, conflicts in the Middle East and ongoing credit and liquidity concerns. Prices for oil and natural gas are also subject to the availability of foreign markets and the Corporation's ability to access such markets. A material decline in prices could result in a reduction of the Corporation's net production revenue. The economics of producing from some wells may change because of lower prices, which could result in reduced production of oil or natural gas and a reduction in the volumes and the value of the Corporation's reserves. The Corporation might also elect not to produce from certain wells at lower prices. Any substantial and extended decline in the price of oil and natural gas would have an adverse effect on the Corporation's carrying value of its reserves, borrowing capacity, revenues, profitability and cash flows from operations and may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects.

See "*Risk Factors – Weakness and Volatility in the Oil and Natural Gas Industry*".

Market Price***The trading price of the Corporation's Common Shares may be adversely affected by factors related and unrelated to the oil and natural gas industry***

The trading price of the securities of oil and natural gas issuers is subject to substantial volatility often based on factors related and unrelated to the financial performance or prospects of the issuers involved. Factors unrelated to the Corporation's performance could include macroeconomic developments nationally, within North America or globally, domestic and global commodity prices, and/or current perceptions of the oil and natural gas market. In recent years, the volatility of commodities has increased due, in part, to the implementation of computerized trading and the decrease of discretionary commodity trading. In addition, the volatility, trading volume and share price of issuers have been impacted by increasing investment levels in passive funds that track major indices, as such funds only purchase securities included in such indices. In addition, in certain jurisdictions, institutions, including government sponsored entities, have determined to decrease their ownership in oil and natural gas entities which may impact the liquidity of certain securities and put downward pressure on the trading price of those securities. Similarly, the market price of the Common Shares of the Corporation could be subject to significant fluctuations in response to variations in the Corporation's operating results, financial condition, liquidity and other internal factors. Accordingly, the price at which the Common Shares of the Corporation will trade cannot be accurately predicted.

Variations in Foreign Exchange Rates and Interest Rates***Variations in foreign exchange rates and interest rates could adversely affect the Corporation's financial condition***

The exchange rate for the Australian dollar has weakened slightly against the Canadian dollar throughout the year. Bengal, through its subsidiary Bengal Australia, received revenue from Australian oil sales in US dollars. These US dollars are then converted to Australian dollars and remain in Australian dollars until expended on operations or capital in Australia. The Australian dollar to US dollar exchange rates may have a material impact on operations. The

Australian dollar to Canadian dollar exchange rates do not materially impact the Corporation's overall profitability.

To the extent that the Corporation engages in risk management activities related to foreign exchange rates, there is a credit risk associated with counterparties with which the Corporation may contract.

An increase in interest rates could result in a significant increase in the amount the Corporation pays to service debt, resulting in a reduced amount available to fund its exploration and development activities, and if applicable, the cash available for dividends. Such an increase could also negatively impact the market price of the Common Shares.

Hedging

Hedging activities expose the Corporation to the risk of financial loss and counter-party risk

From time to time, the Corporation may enter into agreements to receive fixed prices on its oil and natural gas production to offset the risk of revenue losses if commodity prices decline. However, to the extent that the Corporation engages in price risk management activities to protect itself from commodity price declines, it may also be prevented from realizing the full benefits of price increases above the levels of the derivative instruments used to manage price risk. In addition, the Corporation's hedging arrangements may expose it to the risk of financial loss in certain circumstances, including instances in which:

- production falls short of the hedged volumes or prices fall significantly lower than projected;
- there is a widening of price-basis differentials between delivery points for production and the delivery point assumed in the hedge arrangement;
- counterparties to the hedging arrangements or other price risk management contracts fail to perform under those arrangements; or
- a sudden unexpected event materially impacts oil and natural gas prices.

Similarly, from time to time the Corporation may enter into agreements to fix the exchange rate of Canadian to United States dollars or other currencies in order to offset the risk of revenue losses if the Canadian dollar increases in value compared to other currencies. However, if the Canadian dollar declines in value compared to such fixed currencies, the Corporation will not benefit from the fluctuating exchange rate.

Expiration of Licences and Leases

The Corporation or its working interest partners may fail to meet the requirements of a licence or lease, causing its termination or expiry

The Corporation's properties are held in the form of licences and leases and working interests in licences and leases. If the Corporation or the holder of the licence or lease fails to meet the specific requirement of a licence or lease, the licence or lease may terminate or expire. There can be no assurance that any of the obligations required to maintain each licence or lease will be met. The termination or expiration of the Corporation's licences or leases or the working interests relating to a licence or lease and the associated abandonment and reclamation obligations may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects.

Credit Facility Arrangements

Failing to comply with covenants under the Credit Facility could result in restricted access to additional capital or being required to repay all amounts owing thereunder

On February 26, 2021, the Company completed its debt settlement transaction between its wholly-owned subsidiary Bengal Australia Ltd. Pty and Westpac under its Credit Facility. Following this transaction the Company currently has no outstanding credit facilities.

Additional Funding Requirements

The Corporation may require additional financing from time to time to fund the acquisition, exploration and development of properties and its ability to obtain such financing in a timely fashion and on acceptable terms may be negatively impacted by the current economic and global market volatility

The Corporation's cash flow from its reserves may not be sufficient to fund its ongoing activities at all times and from time to time, the Corporation may require additional financing in order to carry out its oil and natural gas acquisition, exploration and development activities. Failure to obtain financing on a timely basis could cause the Corporation to forfeit its interest in certain properties, miss certain acquisition opportunities and reduce or terminate its operations. Due to the conditions in the oil and natural gas industry and/or global economic and political volatility, the Corporation may from time to time have restricted access to capital and increased borrowing costs. The current conditions in the oil and natural gas industry have negatively impacted the ability of oil and natural gas companies to access, or the cost of, additional financing.

As a result of global economic and political conditions and the domestic lending landscape, the Corporation may, from time to time, have restricted access to capital and increased borrowing costs. Failure to obtain suitable financing on a timely basis could cause the Corporation to forfeit its interest in certain properties, miss certain acquisition opportunities and reduce or terminate its operations. If the Corporation's revenues from its reserves decrease as a result of lower oil and natural gas prices or otherwise, it will affect the Corporation's ability to expend the necessary capital to replace its reserves or to maintain its production. To the extent that external sources of capital become limited, unavailable or available on onerous terms, the Corporation's ability to make capital investments and maintain existing assets may be impaired, and its assets, liabilities, business, financial condition and results of operations may be affected materially and adversely as a result. In addition, the future development of the Corporation's petroleum properties may require additional financing and there are no assurances that such financing will be available or, if available, will be available upon acceptable terms. Alternatively, any available financing may be highly dilutive to existing shareholders. Failure to obtain any financing necessary for the Corporation's capital expenditure plans may result in a delay in development or production on the Corporation's properties.

Issuance of Debt

Increased debt levels may impair the Corporation's ability to borrow additional capital on a timely basis to fund opportunities as they arise

From time to time, the Corporation may enter into transactions to acquire assets or shares of other entities. These transactions may be financed in whole or in part with debt, which may increase the Corporation's debt levels above industry standards for oil and natural gas companies of similar size. Depending on future exploration and development plans, the Corporation may require additional debt financing that may not be available or, if available, may not be available on favourable terms. Neither the Corporation's articles nor its by-laws limit the amount of indebtedness that the Corporation may incur. The level of the Corporation's indebtedness from time to time could impair the Corporation's ability to obtain additional financing on a timely basis to take advantage of business opportunities that may arise.

Reserves Estimates

The Corporation's estimated proved and proved plus probable reserves are based on numerous factors and assumptions which may prove incorrect and which may affect the Corporation

There are numerous uncertainties inherent in estimating quantities of oil, natural gas and natural gas liquids reserves and the future cash flows attributed to such reserves. The reserves and associated cash flow information set forth in this document are estimates only. Generally, estimates of economically recoverable oil and natural gas reserves (including the breakdown of reserves by product type) and the future net cash flows from such estimated reserves are based upon a number of variable factors and assumptions, such as:

- historical production from properties;
- production rates;
- ultimate reserve recovery;

- timing and amount of capital expenditures;
- marketability of oil and natural gas;
- royalty rates; and
- the assumed effects of regulation by governmental agencies and future operating costs (all of which may vary materially from actual results).

For those reasons, estimates of the economically recoverable oil and natural gas reserves attributable to any particular group of properties, classification of such reserves based on risk of recovery and estimates of future net revenues associated with reserves prepared by different engineers, or by the same engineers at different times may vary. The Corporation's actual production, revenues, taxes and development and operating expenditures with respect to its reserves will vary from estimates and such variations could be material.

The estimation of proved reserves that may be developed and produced in the future is often based upon volumetric calculations and upon analogy to similar types of reserves rather than actual production history. Recovery factors and drainage areas are often estimated by experience and analogy to similar producing pools. Estimates based on these methods are generally less reliable than those based on actual production history. Subsequent evaluation of the same reserves based upon production history and production practices will result in variations in the estimated reserves and such variations could be material.

In accordance with applicable securities laws, the Corporation's independent reserves evaluator has used forecast prices and costs in estimating the reserves and future net cash flows as summarized herein. Actual future net cash flows will be affected by other factors, such as actual production levels, supply and demand for oil and natural gas, curtailments or increases in consumption by oil and natural gas purchasers, changes in governmental regulation or taxation and the impact of inflation on costs.

Actual production and cash flows derived from the Corporation's oil and natural gas reserves will vary from the estimates contained in the reserve evaluation, and such variations could be material. The reserve evaluation is based in part on the assumed success of activities the Corporation intends to undertake in future years. The reserves and estimated cash flows to be derived therefrom and contained in the reserve evaluation will be reduced to the extent that such activities do not achieve the level of success assumed in the reserve evaluation. The reserve evaluation is effective as of a specific effective date and, except as may be specifically stated, has not been updated and therefore does not reflect changes in the Corporation's reserves since that date.

Seismic Data

Seismic data may not be indicative of drilling results

Even when properly used and interpreted, seismic data and visualization techniques are only tools used to assist geoscientists in identifying subsurface structures, as well as direct eventual hydrocarbon indicators, and do not enable the interpreter to know whether hydrocarbons are, in fact, present in those structures. In addition, the use of seismic and other advanced technologies requires greater pre-drilling expenditures than traditional drilling strategies, and the Corporation could incur losses as a result of such expenditures. As a result, some of the Corporation's drilling activities may not be successful or economical, and the Corporation's overall drilling success rate or its drilling success rate for activities in a particular area could decline, which could have a material adverse effect on expected results of operations and financial condition of the Corporation.

Substantial Capital Requirements

The Corporation's access to capital may be limited or restricted as a result of factors related and unrelated to it, impacting its ability to conduct future operations, acquire and develop reserves

The Corporation anticipates making substantial capital expenditures for the acquisition, exploration, development and production of oil and natural gas reserves in the future. As future capital expenditures will be financed out of cash generated from operations, borrowings and possible future equity sales, the Corporation's ability to do so is dependent on, among other factors:

- the overall state of the capital markets;
- the Corporation's credit rating (if applicable);
- commodity prices;
- interest rates;
- royalty rates;
- tax burden due to current and future tax laws; and
- investor appetite for investments in the energy industry and the Corporation's securities in particular.

Further, if the Corporation's revenues or reserves decline, it may not have access to the capital necessary to undertake or complete future drilling programs. The conditions in, or affecting, the oil and natural gas industry have negatively impacted the ability of oil and natural gas companies, including the Corporation, to access additional financing and/or the cost thereof. There can be no assurance that debt or equity financing, or cash generated by operations will be available or sufficient to meet these requirements or for other corporate purposes or, if debt or equity financing is available, that it will be on terms acceptable to the Corporation. The Corporation may be required to seek additional equity financing on terms that are highly dilutive to existing shareholders. The inability of the Corporation to access sufficient capital for its operations could have a material adverse effect on the Corporation's business financial condition, results of operations and prospects.

Bengal monitors and updates its cash projection models on a regular basis which assists in the timing decision of capital expenditures. Farm outs of projects may be arranged if capital constraints are an issue or if the risk profile dictates that the Corporation wishes to hold a lesser working interest position. Equity, if available and if on favorable terms, may be utilized to help fund Bengal's capital program.

Project Risks

The success of the Corporation's operations may be negatively impacted by factors outside of its control resulting in operational delays, and cost overruns and marketing challenges

The Corporation manages a variety of small and large projects in the conduct of its business. Project interruptions may delay expected revenues from operations. Significant project cost overruns could make a project uneconomic. The Corporation's ability to execute projects and to market oil and natural gas depends upon numerous factors beyond the Corporation's control, including:

- availability of processing capacity;
- availability and proximity of pipeline capacity;
- availability of storage capacity;
- availability of, and the ability to acquire, water supplies needed for drilling, hydraulic fracturing, and waterfloods or the Corporation's ability to dispose of water used or removed from strata at a reasonable cost and in accordance with applicable environmental regulations;
- effects of inclement and severe weather events, including fire, drought and flooding;
- availability of drilling and related equipment;
- unexpected cost increases;
- accidental events;
- currency fluctuations;
- regulatory changes;
- availability and productivity of skilled labour; and
- regulation of the oil and natural gas industry by various levels of government and governmental agencies.

Because of these factors, the Corporation could be unable to execute projects on time, on budget, or at all and may be unable to market the oil and natural gas that it produces effectively. Some of Bengal's oil and natural gas interests are in offshore properties. Offshore operations involve a significant degree of risk including all of the risks associated with all petroleum operations which can be magnified due to operating in remote offshore locations. Fires and explosions on drilling rigs and other offshore platforms are more likely to result in personal injury, loss of life and damage to property due to the remote locations and time required for rescue personnel to get to the locations. Blow-

outs and spills are more likely to result in significant environmental damage to the marine environment, can be difficult to contain and difficult and expensive to remediate. Although Bengal intends to operate in accordance with all recommended and required health, safety and environment practices, which will reduce such risks, there can be no assurance that these risks can be avoided. The occurrence of any of these events could have a materially adverse effect on the Corporation.

Infrastructure

The availability of required infrastructure and its development is not certain

Infrastructure development in many of the countries in which the Corporation operates is limited. These factors may affect the Corporation's ability to explore and develop its properties and to store and transport its oil and natural gas production. There can be no assurance that future instability in one or more of the countries in which the Corporation operates, actions by companies doing business there, or actions taken by the international community will not have a material adverse effect on the countries in question and in turn on the Corporation's financial conditions or operations.

Indigenous Claims

Indigenous claims may affect the Corporation

The Corporation is not aware that any claims have been made in respect of its properties and assets. However, if a claim arose and was successful such claim may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects. In addition, the process of addressing such claims, regardless of the outcome, is expensive and time consuming and could result in delays which could have a material adverse effect on the Corporation's business and financial results.

Bengal has entered into agreements with respect to various permit areas in Australia. The formal grant of some of these permits by Australian government authorities is conditional on and subject to the successful conclusion of Native Title negotiations. Accordingly, there is a risk that the native claims may not be resolved and the permits may not be issued.

All of Bengal's Native Title Agreements in Australia are in good standing and no native claims have been received or contemplated as of the date hereof.

Dilution

The Corporation may issue additional Common Shares, diluting current shareholders

The Corporation may make future acquisitions or enter into financings or other transactions involving the issuance of securities of the Corporation which may be dilutive.

Regulatory

Modification to current, or implementation of additional, regulations may reduce the demand for oil and natural gas and/or increase the Corporation's costs and/or delay planned operations

The implementation of new regulations or the modification of existing regulations affecting the oil and natural gas industry could reduce demand for crude oil and natural gas and increase the Corporation's costs, either of which may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects. Further, the ongoing third party challenges to regulatory decisions or orders has reduced the efficiency of the regulatory regime, as the implementation of the decisions and orders has been delayed resulting in uncertainty and interruption to business of the oil and natural gas industry.

In order to conduct oil and natural gas operations, the Corporation will require regulatory permits, licenses, registrations, approvals and authorizations from various governmental authorities at the municipal, provincial and

federal level. There can be no assurance that the Corporation will be able to obtain all of the permits, licenses, registrations, approvals and authorizations that may be required to conduct operations that it may wish to undertake. In addition, certain federal legislation such as the *Competition Act* (Canada) and the *Investment Canada Act* (Canada) could negatively affect the Corporation's business, financial condition and the market value of the Common Shares or its assets, particularly when undertaking, or attempting to undertake, acquisition or disposition activity. See "*Industry Conditions – Regulatory Authorities and Environmental Regulation*" and "*Industry Conditions – Liability Management Rating Programs*".

Australia

All phases of the oil and natural gas exploration, development and production activities are regulated in varying degrees by the Australian Federal government and relevant State government, either directly or through one or more governmental entities. The areas of government regulation include matters relating to restrictions on production, income taxes, royalties, expropriation of property, environmental protection, land access, rig safety, workplace health and safety, corporate manslaughter and fair employment conditions. In addition, the award of an ATP or PEL and matters relating to the implementation and conduct of operations under these agreements are subject to the consent of the relevant government. Generally all future drilling and production programs by the Corporation in Australia must also be approved by or be subject to review by the Australian Federal government (offshore assets) and relevant State governments (onshore assets). This regulatory environment and possible delays inherent in that environment may increase the risks associated with the Corporation's exploration and production activities and increase the Corporation's costs of doing business.

Competition

The Corporation competes with other oil and natural gas companies, some of which have greater financial and operational resources

The petroleum industry is competitive in all of its phases. The Corporation competes with numerous other entities in the exploration, development, production and marketing of oil and natural gas. The Corporation's competitors include oil and natural gas companies that have substantially greater financial resources, staff and facilities than those of the Corporation. Some of these companies not only explore for, develop and produce oil and natural gas, but also carry on refining operations and market oil and natural gas on an international basis. As a result of these complementary activities, some of these competitors may have greater and more diverse competitive resources to draw on than the Corporation. The Corporation's ability to increase its reserves in the future will depend not only on its ability to explore and develop its present properties, but also on its ability to select and acquire other suitable producing properties or prospects for exploratory drilling. Competitive factors in the distribution and marketing of oil and natural gas include price, process, and reliability of delivery and storage.

Seasonality and Extreme Weather Conditions

Oil and natural gas operations are subject to seasonal and extreme weather conditions and the Corporation may experience significant operational delays as a result

The level of activity in the oil and natural gas industry is influenced by seasonal weather patterns. In Australia, the level of activity and production may be influenced by seasonal weather fluctuations such as, but not limited to, flooding. During these flooding and monsoon events it is usual that access roads and oil hauling roads are impacted for periods of time with the resulting down time for oil production activities. In Australia, access to roads and properties may be restricted or prohibited during times of severe flooding. Seasonal factors and unexpected weather patterns may lead to declines in exploration and production activity of the Corporation. In particular, ATP 934 and its adjacent PLs are prone to seasonal flooding due to its location in the midst of the Cooper Channel country as part of the Lake Eyre basin.

Third Party Credit Risk

The Corporation is exposed to credit risk of third party operators or partners of properties in which it has an interest

The Corporation may be exposed to third party credit risk through its contractual arrangements with its current or future joint venture partners, marketers of its petroleum and natural gas production and other parties. In addition, the Corporation may be exposed to third party credit risk from operators of properties in which the Corporation has a working or royalty interest. In the event such entities fail to meet their contractual obligations to the Corporation, such failures may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects. In addition, poor credit conditions in the industry, generally, and of the Corporation's joint venture partners may affect a joint venture partner's willingness to participate in the Corporation's ongoing capital program, potentially delaying the program and the results of such program until the Corporation finds a suitable alternative partner. To the extent that any of such third parties go bankrupt, become insolvent or make a proposal or institute any proceedings relating to bankruptcy or insolvency, it could result in the Corporation being unable to collect all or a portion of any money owing from such parties. Any of these factors could materially adversely affect the Corporation's financial and operational results.

Environmental

Compliance with environmental regulations requires the dedication of a portion of the Corporation's financial and operational resources

All phases of the oil and natural gas business present environmental risks and hazards and are subject to environmental regulation pursuant to a variety of federal, provincial and local laws and regulations. Environmental legislation provides for, among other things, the initiation and approval of new oil and natural gas projects, restrictions and prohibitions on the spill, release or emission of various substances produced in association with oil and natural gas industry operations. In addition, such legislation sets out the requirements with respect to oilfield waste handling and storage, habitat protection and the satisfactory operation, maintenance, abandonment and reclamation of well and facility sites. New environmental legislation may increase uncertainty among oil and natural gas industry participants as the new laws are implemented, and the effects of the new rules and standards are felt in the oil and natural gas industry. See "*Industry Conditions – Regulatory Authorities and Environmental Regulation*" and "*Industry Conditions – Climate Change Regulation*".

Compliance with environmental legislation can require significant expenditures and a breach of applicable environmental legislation may result in the imposition of fines and penalties, some of which may be material. Environmental legislation is evolving in a manner expected to result in stricter standards and enforcement, larger fines and liability and potentially increased capital expenditures and operating costs. The discharge of oil, natural gas or other pollutants into the air, soil or water may give rise to liabilities to governments and third parties and may require the Corporation to incur costs to remedy such discharge. Although the Corporation believes that it will be in material compliance with current applicable environmental legislation, no assurance can be given that environmental compliance requirements will not result in a curtailment of production or a material increase in the costs of production, development or exploration activities or otherwise have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects.

Reliance on a Skilled Workforce and Key Personnel

An inability to recruit and retain a skilled workforce and key personnel may negatively impact the Corporation

The operations and management of the Corporation require the recruitment and retention of a skilled workforce, including engineers, technical personnel and other professionals. The loss of key members of such workforce, or a substantial portion of the workforce as a whole, could result in the failure to implement the Corporation's business plans which could have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects.

Competition for qualified personnel in the oil and natural gas industry is intense and there can be no assurance that the Corporation will be able to continue to attract and retain all personnel necessary for the development and operation of its business. The Corporation does not have any key personnel insurance in effect. Contributions of the existing management team to the immediate and near term operations of the Corporation are likely to be of central importance. In addition certain of the Corporation's current employees are senior and have significant institutional knowledge that

must be transferred to other employees prior to their departure from the workforce. If the Corporation is unable to: (i) retain current employees; (ii) successfully complete effective knowledge transfers; and/or (iii) recruit new employees with the requisite knowledge and experience, the Corporation could be negatively impacted. In addition, the Corporation could experience increased costs to retain and recruit these professionals.

Title to and Right to Produce from Assets

Defects in the title or rights to produce the Corporation's properties may result in a financial loss

Although title reviews may be conducted prior to the purchase of oil and natural gas producing properties or the commencement of drilling wells, such reviews do not guarantee or certify that a defect in the chain of title will not arise to defeat the Corporation's claim. The Corporation's actual title to and interest in its properties, and its right to produce and sell the oil and natural gas therefrom, may vary from the Corporation's records. In addition, there may be valid legal challenges or legislative changes that affect the Corporation's title to and right to produce from its oil and natural gas properties, which could impair the Corporation's activities and result in a reduction of the revenue received by the Corporation.

If a defect exists in the chain of title or in the Corporation's right to produce, or a legal challenge or legislative change arises, it is possible that the Corporation may lose all, or a portion of, the properties to which the title defect relates and/or its right to produce from such properties. This may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects.

Insurance

Not all risks of conducting oil and natural gas opportunities are insurable and the occurrence of an uninsurable event may have a materially adverse effect on the Corporation

Bengal's involvement in the exploration for and development of oil and natural gas properties may result in the Corporation becoming subject to liability for pollution, blowouts, property damage, personal injury or other hazards. Although Bengal has insurance in accordance with industry standards to address such risks, such insurance has limitations on liability that may not be sufficient to cover the full extent of such liabilities. In addition, such risks may not, in all circumstances be insurable or, in certain circumstances, the Corporation may elect not to obtain insurance to deal with specific risks due to the high premiums associated with such insurance or other reasons. The payment of such uninsured liabilities would reduce the funds available to Bengal. The occurrence of a significant event that the Corporation is not fully insured against, or the insolvency of the insurer of such event, could have a material adverse effect on Bengal's financial position, results of operations or prospects.

Breach of Confidentiality

Breach of confidentiality by a third party could impact the Corporation's competitive advantage or put it at risk of litigation

While discussing potential business relationships or other transactions with third parties, the Corporation may disclose confidential information relating to its business, operations or affairs. Although confidentiality agreements are generally signed by third parties prior to the disclosure of any confidential information, a breach could put the Corporation at competitive risk and may cause significant damage to its business. The harm to the Corporation's business from a breach of confidentiality cannot presently be quantified, but may be material and may not be compensable in damages. There is no assurance that, in the event of a breach of confidentiality, the Corporation will be able to obtain equitable remedies, such as injunctive relief, from a court of competent jurisdiction in a timely manner, if at all, in order to prevent or mitigate any damage to its business that such a breach of confidentiality may cause.

Income Taxes

Taxation authorities may reassess the Corporation's tax returns

The Corporation files all required income tax returns and believes that it is in full compliance with the provisions of the *Income Tax Act* (Canada) and all other applicable tax legislation. However, such returns are subject to reassessment by the applicable taxation authority. In the event of a successful reassessment of the Corporation, whether by re-characterization of exploration and development expenditures or otherwise, such reassessment may have an impact on current and future taxes payable.

Income tax laws relating to the oil and natural gas industry, such as the treatment of resource taxation or dividends, may in the future be changed or interpreted in a manner that adversely affects the Corporation. Furthermore, tax authorities having jurisdiction over the Corporation may disagree with how the Corporation calculates its income for tax purposes or could change administrative practices to the Corporation's detriment.

Non-Governmental Organizations

The Corporation's properties may be subject to action by non-governmental organizations or terrorist attack

The oil and natural gas exploration, development and operating activities conducted by the Corporation may, at times, be subject to public opposition. Such public opposition could expose the Corporation to the risk of higher costs, delays or even project cancellations due to increased pressure on governments and regulators by special interest groups including Indigenous groups, landowners, environmental interest groups (including those opposed to oil and natural gas production operations) and other non-governmental organizations, blockades, legal or regulatory actions or challenges, increased regulatory oversight, reduced support from the federal, provincial or municipal governments, delays in, challenges to, or the revocation of regulatory approvals, permits and/or licenses, and direct legal challenges, including the possibility of climate-related litigation. There is no guarantee that the Corporation will be able to satisfy the concerns of the special interest groups and non-governmental organizations and attempting to address such concerns may require the Corporation to incur significant and unanticipated capital and operating expenditures.

In addition, the Corporation's oil and natural gas properties, wells and facilities could be the subject of a terrorist attack. If any of the Corporation's properties, wells or facilities are the subject of terrorist attack it may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects. The Corporation does not have insurance to protect against the risk from terrorism.

Failure to Realize Anticipated Benefits of Acquisitions and Dispositions

The anticipated benefits of acquisitions may not be achieved and the Corporation may dispose of non-core assets for less than their carrying value on the financial statements as a result of weak market conditions

The Corporation considers acquisitions and dispositions of businesses and assets in the ordinary course of business. Achieving the benefits of acquisitions depends on successfully consolidating functions and integrating operations and procedures in a timely and efficient manner and the Corporation's ability to realize the anticipated growth opportunities and synergies from combining the acquired businesses and operations with those of the Corporation. The integration of acquired businesses and assets may require substantial management effort, time and resources diverting management's focus from other strategic opportunities and operational matters. Management continually assesses the value and contribution of services provided by third parties and the resources required to provide such services. In this regard, non-core assets may be periodically disposed of so the Corporation can focus its efforts and resources more efficiently. Depending on the market conditions for such non-core assets, certain non-core assets of the Corporation may realize less on disposition than their carrying value on the financial statements of the Corporation.

Cost of New Technologies

The Corporation's ability to successfully implement new technologies into its operations in a timely and efficient manner will affect its ability to compete

The petroleum industry is characterized by rapid and significant technological advancements and introductions of new products and services utilizing new technologies. Other companies may have greater financial, technical and personnel resources that allow them to implement and benefit from technological advantages. There can be no assurance that

the Corporation will be able to respond to such competitive pressures and implement such technologies on a timely basis or at an acceptable cost. If the Corporation does implement such technologies, there is no assurance that the Corporation will do so successfully. One or more of the technologies currently utilized by the Corporation or implemented in the future may become obsolete. If the Corporation is unable to utilize the most advanced commercially available technology, or is unsuccessful in implementing certain technologies, its business, financial condition and results of operations could also be adversely affected in a material way.

Operational Dependence

The successful operation of a portion of the Corporation's properties is dependent on third parties

Other companies operate some of the assets in which the Corporation has an interest. The Corporation has limited ability to exercise influence over the operation of those assets or their associated costs, which could adversely affect the Corporation's financial performance. The Corporation's return on assets operated by others depends upon a number of factors that may be outside of the Corporation's control, including, but not limited to, the timing and amount of capital expenditures, the operator's expertise and financial resources, the approval of other participants, the selection of technology and risk management practices.

In addition, due to low and volatile commodity prices, many companies, including companies that may operate some of the assets in which the Corporation has an interest, may be in financial difficulty, which could impact their ability to fund and pursue capital expenditures, carry out their operations in a safe and effective manner and satisfy regulatory requirements with respect to abandonment and reclamation obligations. If companies that operate some of the assets in which the Corporation has an interest fail to satisfy regulatory requirements with respect to abandonment and reclamation obligations the Corporation may be required to satisfy such obligations and to seek reimbursement from such companies. To the extent that any of such companies go bankrupt, become insolvent or make a proposal or institute any proceedings relating to bankruptcy or insolvency, it could result in such assets being shut-in, the Corporation potentially becoming subject to additional liabilities relating to such assets and the Corporation having difficulty collecting revenue due from such operators or recovering amounts owing to the Corporation from such operators for their share of abandonment and reclamation obligations. Any of these factors could have a material adverse affect on the Corporation's financial and operational results.

Royalty Regimes

Changes to royalty regimes may negatively impact the Corporation's cash flows

There can be no assurance that the Australian, Queensland or South Australia state governments or the Canadian federal government and the provincial governments of the western provinces will not adopt new royalty regimes, or modify the existing royalty regimes, which may have an impact on the economics of the Corporation's projects. An increase in royalties would reduce the Corporation's earnings and could make future capital investments, or the Corporation's operations, less economic.

Climate Change

Climate change may pose varied and far ranging risks to the business and operations of the Corporation, both known and unknown, that may adversely affect the Corporation's business, financial condition, results of operations, prospects, reputation and share price

Chronic Climate Change Risks

The Corporation's exploration and production facilities and other operations and activities emit greenhouse gases ("GHG") which may require the Corporation to comply with greenhouse gas emissions legislation at the Australian state, territorial or federal level. Climate change policy is evolving at regional, national and international levels, and political and economic events may significantly affect the scope and timing of climate change measures that are ultimately put in place to prevent climate change or mitigate its effects. The direct or indirect costs of compliance with GHG-related regulations may have a material adverse effect on the Corporation's business, financial condition, results

of operations and prospects. Some of the Corporation's significant facilities may ultimately be subject to future regional, provincial and/or federal climate change regulations to manage GHG emissions

Climate change has been linked to long-term shifts in climate patterns, including sustained higher temperatures. As the level of activity in the Canadian oil and natural gas industry is influenced by seasonal weather patterns, long-term shifts in climate patterns pose the risk of exacerbating operational delays and other risks posed by seasonal weather patterns. See "*Risk Factors – Seasonality and Extreme Weather Conditions*". In addition, long-term shifts in weather patterns such as water scarcity, increased frequency of storm and fire and prolonged heat waves may, among other things, require the Corporation to incur greater expenditures (time and capital) to deal with the challenges posed by such changes to its premises, operations, supply chain, transport needs, and employee safety. Specifically, in the event of water shortages or sourcing issues, the Corporation may not be able to, or will incur greater costs to, carry out hydraulic fracturing operations.

Concerns about climate change have resulted in a number of environmental activists and members of the public opposing the continued exploitation and development of fossil fuels which has influenced investors' willingness to invest in the oil and natural gas industry.

Given the evolving nature of climate change policy and the control of GHG and resulting requirements, it is expected that current and future climate change regulations will have the effect of increasing the Corporation's operating expenses, and, in the long-term, potentially reducing the demand for oil and natural gas production, resulting in a decrease in the Corporation's profitability and a reduction in the value of its assets or requiring asset impairments for financial statement purposes.

Acute Climate Change Risk

Climate change has been linked to extreme weather conditions. Extreme hot and cold weather, heavy snowfall, heavy rainfall and wildfires may restrict the Corporation's ability to access its properties, cause operational difficulties including damage to machinery and facilities. Extreme weather also increases the risk of personnel injury as a result of dangerous working conditions. Certain of the Corporation's assets are located in locations that are proximate to bushlands and river flood plains and a wildfire or flood may lead to temporary downtime and/or damage to oil or natural gas producing assets.

Moreover, extreme weather conditions may lead to disruptions in the Corporation's ability to transport produced oil and natural gas as well as goods and services in its supply chain.

Availability and Cost of Material and Equipment

Restrictions on the availability of and access to drilling equipment may impede the Corporation's exploration and development activities

Oil and natural gas exploration, development and operating activities are dependent on the availability and cost of specialized materials and equipment (typically leased from third parties) in the areas where such activities are conducted. The availability of such material and equipment is limited. An increase in demand or cost, or a decrease in the availability of such materials and equipment may impede the Corporation's exploration, development and operating activities.

Management of Growth

The Corporation may not be able to effectively manage the growth of its business

The Corporation may be subject to growth related risks including capacity constraints and pressure on its internal systems and controls. The ability of the Corporation to manage growth effectively will require it to continue to implement and improve its operational and financial systems and to expand, train and manage its employee base. The inability of the Corporation to deal with this growth may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects.

Dividends***The Corporation does not pay dividends and there is no assurance that it will do so in the future***

The Corporation has not paid any dividends on its outstanding shares. Payment of cash dividends in the future, if any, will be subject to the discretion of the Board of Directors of Bengal and may vary depending on a variety of factors and conditions existing from time to time, including fluctuations in commodity prices, production levels, capital expenditure requirements, debt service requirements, operating costs, royalty burdens, foreign exchange rates and the satisfaction of the liquidity and solvency tests imposed by applicable corporate law for the declaration and payment of dividends.

Litigation***The Corporation may be involved in litigation in the course of its normal operations and the outcome of the litigation may adversely affect the Corporation and its reputation***

In the normal course of the Corporation's operations, it may become involved in, named as a party to, or be the subject of, various legal proceedings, including regulatory proceedings, tax proceedings and legal actions. Potential litigation may develop in relation to personal injuries (including resulting from exposure to hazardous substances, property damage, property taxes, land and access rights, environmental issues, including claims relating to contamination or natural resource damages and contract disputes). The outcome with respect to outstanding, pending or future proceedings cannot be predicted with certainty and may be determined adversely to the Corporation and could have a material adverse effect on the Corporation's assets, liabilities, business, financial condition, results of operations and prospects. Even if the Corporation prevails in any such legal proceedings, the proceedings could be costly and time-consuming and may divert the attention of management and key personnel from business operations, which could have an adverse affect on the Corporation's financial condition. Also see "*Legal Proceedings and Regulatory Actions*".

Conflicts of Interest***Conflicts of interest may arise for the Corporation's directors and officers who are also involved with other industry participants***

Certain directors or officers of the Corporation may also be directors or officers of other oil and natural gas companies and as such may, in certain circumstances, have a conflict of interest. Conflicts of interest, if any, will be subject to and governed by procedures prescribed by the ABCA which require a director or officer of a corporation who is a party to, or is a director or an officer of, or has a material interest in any person who is a party to, a material contract or proposed material contract with the Corporation to disclose his or her interest and, in the case of directors, to refrain from voting on any matter in respect of such contract unless otherwise permitted under the ABCA . See "*Conflicts of Interest*".

Forward-Looking Information***Forward-Looking Information may prove inaccurate***

Shareholders and prospective investors are cautioned not to place undue reliance on the Corporation's forward-looking information. By its nature, forward-looking information involves numerous assumptions, known and unknown risks and uncertainties, of both a general and specific nature, that could cause actual results to differ materially from those suggested by the forward-looking information or contribute to the possibility that predictions, forecasts or projections will prove to be materially inaccurate.

Additional information on the risks, assumption and uncertainties are found under the heading "*Forward-Looking Statements*".

Expansion into New Activities

Expanding the Corporation's business exposes it to new risks and uncertainties

The operations and expertise of the Corporation's management are currently focused primarily on oil and natural gas production, exploration and development in Australia. In the future, the Corporation may acquire or move into new industry related activities or new geographical areas and may acquire different energy related assets; as a result, the Corporation may face unexpected risks or, alternatively, its exposure to one or more existing risk factors may be significantly increased, which may in turn result in the Corporation's future operational and financial conditions being materially adversely affected.

Gathering and Processing Facilities, Pipeline Systems and Trucking***Lack of capacity and/or regulatory constraints on gathering and processing facilities, pipeline systems and tanker truck loading and unloading terminals may have a negative impact on the Corporation's ability to produce and sell its oil and natural gas***

Bengal delivers its products through gathering and processing facilities, pipeline systems and, in certain circumstances, by tanker truck. The amount of oil and natural gas that Bengal can produce and sell is subject to the accessibility, availability, proximity and capacity of these gathering and processing facilities, pipeline systems and tanker trucks. The lack of availability of capacity in any of the gathering and processing facilities, pipeline systems and truck loading and unloading terminals could result in Bengal's inability to realize the full economic potential of its production or in a reduction of the price offered for Bengal's production. The lack of firm pipeline capacity continues to affect the oil and natural gas industry and limit the ability to transport produced oil and natural gas to market. In addition, the pro-rationing of capacity on inter-provincial pipeline systems continues to affect the ability to export oil and natural gas. Unexpected shut downs or curtailment of capacity of pipelines for maintenance or integrity work or because of actions taken by regulators could also affect the Corporation's production, operations and financial results. Any significant change in market factors or other conditions affecting these infrastructure systems and facilities, as well as any delays or uncertainty in constructing new infrastructure systems and facilities could harm Bengal's business and, in turn, Bengal's financial condition, operations and cash flows.

Bengal's oil production is processed through facilities owned by third parties and over which Bengal does not have control. From time to time these facilities may discontinue or decrease operations either as a result of normal servicing requirements or as a result of unexpected events. A discontinuation or decrease of operations could have a materially adverse effect on Bengal's ability to process its production and deliver the same for sale.

Carbon Pricing Risk***Taxes on carbon emissions affect the demand for oil and natural gas, the Corporation's operating expenses and may impair the Corporation's ability to compete***

The majority of countries across the globe have agreed to reduce their carbon emissions in accordance with the Paris Agreement. See "*Industry Conditions – Regulatory Authorities and Environmental Regulation*" and "*Industry Conditions – Climate Change Regulation*". The taxes placed on carbon emissions may have the effect of decreasing the demand for oil and natural gas products and at the same time, increasing the Corporation's operating expenses, each of which may have a material adverse effect on the Corporation's profitability and financial condition. Further, the imposition of carbon taxes puts the Corporation at a disadvantage with its counterparts who operate in jurisdictions where there are less costly carbon regulations.

Disposal of Fluids Used in Operations***Regulations regarding the disposal of fluids used in the Corporation's operations may increase its costs of compliance or subject it to regulatory penalties or litigation***

The safe disposal of the hydraulic fracturing fluids (including the additives) and water recovered from oil and natural gas wells is subject to ongoing regulatory review by the federal and provincial governments, including its effect on fresh water supplies and the ability of such water to be recycled, amongst other things. While it is difficult to predict

the impact of any regulations that may be enacted in response to such review, the implementation of stricter regulations may increase the Corporation's costs of compliance.

Alternatives to and Changing Demand for Petroleum Products

Changes to the demand for oil and natural gas products and the rise of petroleum alternatives may negatively affect the Corporation's financial condition, results of operations and cash flow

Fuel conservation measures, alternative fuel requirements, increasing consumer demand for alternatives to oil and natural gas and technological advances in fuel economy and renewable energy generation systems could reduce the demand for oil, natural gas and liquid hydrocarbons. Recently, certain jurisdictions have implemented policies or incentives to decrease the use of fossil fuels and encourage the use of renewable fuel alternatives, which may lessen the demand for petroleum products and put downward pressure on commodity prices. Advancements in energy efficient products have a similar effect on the demand for oil and natural gas products. The Corporation cannot predict the impact of changing demand for oil and natural gas products, and any major changes may have a material adverse effect on the Corporation's business, financial condition, results of operations and cash flow by decreasing the Corporation's profitability, increasing its costs, limiting its access to capital and decreasing the value of its assets.

Political Uncertainty

The Corporation's business may be adversely affected by recent political and social events and decisions made in Canada, the United States, Europe and elsewhere

To the extent that certain political actions taken in North America, Europe and elsewhere in the world result in a marked decrease in free trade, access to personnel and freedom of movement, it could have an adverse effect on the Corporation's ability to market its products internationally, increase costs for goods and services required for the Corporation's operations, reduce access to skilled labour and negatively impact the Corporation's business, operations, financial conditions and the market value of the Common Shares.

Information Technology Systems and Cyber-Security

Breaches of the Corporation's cyber-security and loss of, or access to, electronic data may adversely impact the Corporation's operations and financial position

The Corporation is increasingly dependent upon the availability, capacity, reliability and security of our information technology infrastructure, and our ability to expand and continually update this infrastructure, to conduct daily operations. The Corporation depends on various information technology systems to estimate reserve quantities, process and record financial data, manage its land base, manage financial resources, analyze seismic information, administer contracts with operators and lessees and communicate with employees and third-party partners.

Further, the Corporation is subject to a variety of information technology and system risks as a part of its operations including potential breakdown, invasion, virus, cyber-attack, cyber-fraud, security breach, and destruction or interruption of the Corporation's information technology systems by third parties or insiders. Unauthorized access to these systems by employees or third parties could lead to corruption or exposure of confidential, fiduciary or proprietary information, interruption to communications or operations or disruption to our business activities or the Corporation's competitive position. In addition, cyber phishing attempts, in which a malicious party attempts to obtain sensitive information such as usernames, passwords, and credit card details (and money) by disguising as a trustworthy entity in an electronic communication, have become more widespread and sophisticated in recent years. If the Corporation becomes a victim to a cyber phishing attack it could result in a loss or theft of the Corporation's financial resources or critical data and information, or could result in a loss of control of the Corporation's technological infrastructure or financial resources. The Corporation's employees are often the targets of such cyber phishing attacks, as they are and will continue to be targeted by parties using fraudulent "spoof" emails to misappropriate information or to introduce viruses or other malware through "Trojan horse" programs to the Corporation's computers. These emails appear to be legitimate emails, but direct recipients to fake websites operated by the sender of the email or request recipients to send a password or other confidential information through email or to download malware. The

ongoing COVID-19 pandemic has increased the Corporation's cyber-attacks, as increased malicious activities are creating more threats for cyberattacks including COVID-19 phishing emails, malware-embedded mobile apps that purport to track infection rates, and targeting of vulnerabilities in remote access platforms as many companies continue to operate with work from home arrangements.

The Corporation maintains policies and procedures that address and implement employee protocols with respect to electronic communications and electronic devices. The Corporation has also implemented new information technology policies applicable to employees who are working remotely during the COVID-19 pandemic. The Corporation also employs encryption protection of its confidential information, all computers and other electronic devices. Despite the Corporation's efforts to mitigate such cyber phishing attacks through education and training, cyber phishing activities remain a serious problem that may damage its information technology infrastructure. The Corporation applies technical and process controls in line with industry-accepted standards to protect its information, assets and systems, including a written incident response plan for responding to a cyber-security incident. However, these controls may not adequately prevent cyber-security breaches. Disruption of critical information technology services, or breaches of information security, could have a negative effect on the Corporation's performance and earnings, as well as on its reputation, and any damages sustained may not be adequately covered by the Corporation's current insurance coverage, or at all. The significance of any such event is difficult to quantify but may in certain circumstances be material and could have a material adverse effect on the Corporation's business, financial condition and results of operations.

Social Media

The Corporation faces compliance and supervisory challenges in respect of the use of social media as a means of communicating with clients and the general public

Increasingly, social media is used as a vehicle to carry out cyber phishing attacks. Information posted on social media sites, for business or personal purposes, may be used by attackers to gain entry into the Corporation's systems and obtain confidential information. The Corporation restricts the social media access of its employees. Despite these efforts, as social media continues to grow in influence and access to social media platforms becomes increasingly prevalent, there are significant risks that the Corporation may not be able to properly regulate social media use and preserve adequate records of business activities and client communications conducted through the use of social media platforms.

Reputational Risk Associated with the Corporation's Operations

The Corporation relies on its reputation to continue its operations and to attract and retain investors and employees

The Corporation's business, operations or financial condition may be negatively impacted as a result of any negative public opinion towards the Corporation or as a result of any negative sentiment toward, or in respect of, the Corporation's reputation with stakeholders, special interest groups, political leadership, the media or other entities. Public opinion may be influenced by certain media and special interest groups' negative portrayal of the industry in which the Corporation operates as well as their opposition to certain oil and natural gas projects. Potential impacts of negative public opinion or reputational issues may include delays or interruptions in operations, legal or regulatory actions or challenges, blockades, increased regulatory oversight, reduced support for, delays in, challenges to, or the revocation of regulatory approvals, permits and/or licenses and increased costs and/or cost overruns. The Corporation's reputation and public opinion could also be impacted by the actions and activities of other companies operating in the oil and natural gas industry, particularly other producers, over which the Corporation has no control. Similarly, the Corporation's reputation could be impacted by negative publicity related to loss of life, injury or damage to property and environmental damage caused by the Corporation's operations. In addition, if the Corporation develops a reputation of having an unsafe work site, it may impact the ability of the Corporation to attract and retain the necessary skilled employees and consultants to operate its business. Opposition from special interest groups opposed to oil and natural gas development and the possibility of climate related litigation against governments and fossil fuel companies may impact the Corporation's reputation. See "*Risk Factors – Climate Change*".

Changing Investor Sentiment

Changing investor sentiment towards the oil and natural gas industry may impact the Corporation's access to, and cost of, capital

A number of factors, including the effects of the use of fossil fuels on climate change, the impact of oil and natural gas operations on the environment, environmental damage relating to spills of petroleum products during production and transportation and concerns of Indigenous rights, have affected certain investors' sentiments towards investing in the oil and natural gas industry. As a result of these concerns, some institutional, retail and government investors have announced that they no longer are willing to fund or invest in oil and natural gas properties or companies or are reducing the amount thereof over time. In addition, certain institutional investors are requesting that issuers develop and implement more robust social, environmental and governance policies and practices. Developing and implementing such policies and practices can involve significant costs and require a significant time commitment from the board of directors, management and employees of the Corporation. Failing to implement the policies and practices as requested by investors may result in such investors reducing their investment in the Corporation or not investing in the Corporation at all. Any reduction in the investor base interested or willing to invest in the oil and natural gas industry and more specifically, the Corporation, may result in limiting the Corporation's access to capital, increasing the cost of capital, and decreasing the price and liquidity of the Corporation's securities even if the Corporation's operating results, underlying asset values or prospects have not changed. Additionally, these factors, as well as other related factors, may cause a decrease in the value of the Corporation's assets which may result in an impairment change.

Intellectual Property Litigation

Unauthorized use of intellectual property may cause the Corporation to engage in or be the subject of litigation

Due to the rapid development of oil and natural gas technology, in the normal course of the Corporation's operations, the Corporation may become involved in, named as a party to, or be the subject of, various legal proceedings in which it is alleged that the Corporation has infringed the intellectual property rights of others or which the Corporation initiates against others it believes are infringing upon its intellectual property rights. The Corporation's involvement in intellectual property litigation could result in significant expense, adversely affecting the development of its assets or intellectual property or diverting the efforts of its technical and management personnel, whether or not such litigation is resolved in the Corporation's favour. In the event of an adverse outcome as a defendant in any such litigation, the Corporation may, among other things, be required to: (a) pay substantial damages and/or cease the development, use, sale or importation of processes that infringe upon other patented intellectual property; (b) expend significant resources to develop or acquire non-infringing intellectual property; (c) discontinue processes incorporating infringing technology; or (d) obtain licences to the infringing intellectual property. However, the Corporation may not be successful in such development or acquisition or such licences may not be available on reasonable terms. Any such development, acquisition or licence could require the expenditure of substantial time and other resources and could have a material adverse effect on the Corporation's business and financial results.

ADDITIONAL INFORMATION

Additional information relating to the Corporation can be found on SEDAR at www.sedar.com. Additional information, including directors' and officers' remuneration and indebtedness, principal holders of the Corporation's securities and securities authorized for issuance under equity compensation plans is contained in the Corporation's information circular for the Corporation's most recent annual meeting of security holders that involved the election of directors. Additional financial information is contained in the Corporation's consolidated financial statements and the related management's discussion and analysis for the Corporation's most recently completed financial year.

FORM 51-101F3
REPORT OF MANAGEMENT AND DIRECTORS ON OIL AND GAS DISCLOSURE

Report of Management and Directors on Reserves Data and Other Information

Management of Bengal Energy Ltd. (the "**Corporation**") is responsible for the preparation and disclosure of information with respect to the Corporation's oil and gas activities in accordance with securities regulatory requirements. This information includes reserves data.

An independent qualified reserves evaluator has evaluated the Corporation's reserves data. The report of the independent qualified reserves evaluator is presented below.

The Reserves Committee of the board of directors of the Corporation has:

- (a) reviewed the Corporation's procedures for providing information to the independent qualified reserves evaluator;
- (b) met with the independent qualified reserves evaluator to determine whether any restrictions affected the ability of the independent qualified reserves evaluator to report without reservation; and
- (c) reviewed the reserves data with management and the independent qualified reserves evaluator.

The Reserves Committee of the board of directors has reviewed the Corporation's procedures for assembling and reporting other information associated with oil and gas activities and has reviewed that information with management. The board of directors has, on the recommendation of the Reserves Committee, approved:

- (a) the content and filing with securities regulatory authorities of Form 51-101F1 containing reserves data and other oil and gas information;
- (b) the filing of Form 51-101F2 which is the report of the independent qualified reserves evaluator on the reserves data, contingent resources data, or prospective resources data; and
- (c) the content and filing of this report.

Because the reserves data are based on judgments regarding future events, actual results will vary and the variations may be material.

DATED as of this 29 day of June, 2021.

FORM 51-101F2

REPORT ON RESERVES DATA

BY INDEPENDENT QUALIFIED RESERVES EVALUATOR OR AUDITOR

Report on Reserves Data by Independent Qualified Reserves Evaluator or Auditor

To the Board of Directors of Bengal Energy Ltd. (the "**Corporation**):

1. We have evaluated the Corporation's Reserves Data as at March 31, 2021. The reserves data are estimates of proved reserves and probable reserves and related future net revenue as at March 31, 2021, estimated using forecast prices and costs.
2. The reserves data are the responsibility of the Corporation's management. Our responsibility is to express an opinion on the reserves data based on our evaluation.
3. We carried out our evaluation in accordance with standards set out in the Canadian Oil and Gas Evaluation Handbook as amended from time to time (the "**COGE Handbook**") maintained by the Society of Petroleum Evaluation Engineers (Calgary Chapter).
4. Those standards require that we plan and perform an evaluation to obtain reasonable assurance as to whether the reserves data are free of material misstatement. An evaluation also includes assessing whether the reserves data are in accordance with principles and definitions presented in the COGE Handbook.
5. The following table shows the net present value of future net revenue (before deduction of income taxes) attributed to proved plus probable reserves, estimated using forecast prices and costs and calculated using a discount rate of 10 percent, included in the reserves data of the Corporation evaluated for the year ended March 31, 2021, and identifies the respective portions thereof that we have evaluated and reported on to the Corporation's board of directors:

Independent Qualified Reserves Evaluator or Auditor	Effective Date of Evaluation Report	Location of Reserves (Country or Foreign Geographic Area)	Net Present Value of Future Net Revenue (before income taxes, 10% discount rate – CANS)			
			Audited (\$M)	Evaluated (\$M)	Reviewed (\$M)	Total (\$M)
GLJ Ltd.	March 31, 2021	Australia	-	87,568	-	87,568

6. In our opinion, the reserves data evaluated by us have, in all material respects, been determined and are in accordance with the COGE Handbook, consistently applied. We express no opinion on the reserves data that we reviewed but did not audit or evaluate.
7. We have no responsibility to update our reports referred to in paragraph 5 for events and circumstances occurring after the effective date of our reports.
8. Because the reserves data are based on judgements regarding future events, actual results will vary and the variations may be material.

Executed as to our report referred to above:

GLJ Ltd., Calgary, Alberta, dated June 15, 2021.

GLJ LTD.

SCHEDULE "C"

AUDIT COMMITTEE MANDATE AND TERMS OF REFERENCE

I. ROLE AND OBJECTIVE

- A. The Audit Committee (the "**Committee**") is a committee of the board of directors (the "**Board**") of Bengal Energy Ltd. (the "**Corporation**") to which the Board has delegated its responsibility for oversight of the nature and scope of the annual audit, management's reporting on internal accounting standards and practices, financial information and accounting systems and procedures, financial reporting and statements and recommending, for approval of the Board, the audited financial statements, interim financial statements and other mandatory disclosure releases containing financial information. The primary objectives of the Committee are as follows:
- (a) To assist directors of the Corporation (the "**Directors**") on meeting their responsibilities in respect of the review, approval, preparation and disclosure of the financial statements of the Corporation and related documentation;
 - (b) To provide a communication link between independent Directors and external auditors;
 - (c) To enhance the external auditor's independence;
 - (d) To increase the credibility and objectivity of financial reports; and
 - (e) To strengthen the role of the outside Directors by facilitating in depth discussions between Directors on the Committee, management and external auditors.

II. MEMBERSHIP OF COMMITTEE

- A. The Committee shall be comprised of at least three (3) Directors, none of whom are members of management of the Corporation and all of whom "independent" (as such term is used in National Instrument 52-110 — *Audit Committees* ("**NI 52-110**") unless the Board shall have determined that the exemption contained in NI 52-110 is available and has determined to rely thereon.
- B. The Board shall appoint the Chair of the Committee, who shall be an independent Director.
- C. All of the members of the Committee shall be "financially literate" (as such term is defined in NI 52-110 and by the Toronto Stock Exchange or other applicable regulatory authority) unless the Board shall determine that an exemption under NI 52-110 from such requirement in respect of any particular member is available and has determined to rely thereon in accordance with the provisions of NI 52-110.

III. MANDATE AND RESPONSIBILITIES OF COMMITTEE

- A. The Committee shall provide oversight on the work of the external auditors, including resolution of disagreements between management and the external auditors regarding financial reporting.
- B. The Committee will review and obtain reasonable assurance that the risk management, internal control and information systems are operating effectively to produce accurate, appropriate and timely management and financial information. This includes:
 - (a) identify, monitor and mitigate business risks;
 - (b) ensure compliance with legal, ethical and regulatory requirements;
 - (c) review the Corporation's risk management controls and policies;
 - (d) obtain reasonable assurance that the information systems are reliable and the systems of internal controls are properly designed and effectively implemented through discussions with and reports from management and the external auditor;
 - (e) review management steps to implement and maintain appropriate internal control procedures including a review of policies;
 - (f) review adequacy of security of information, information systems and recovery plans;
 - (g) monitor compliance with statutory and regulatory obligations;
 - (h) review the appointment of the Chief Financial Officer; and
 - (i) review the adequacy of accounting and finance resources.
- C. The primary responsibility of the Committee is to review the annual and interim financial statements of the Corporation and related management's discussion and analysis ("MD&A") prior to their submission to the Board for approval. The process should include but not be limited to:
 - (a) reviewing changes in accounting principles and policies, or in their application, which may have a material impact on the current or future years' financial statements;
 - (b) reviewing significant accruals, reserves or other estimates such as the ceiling test calculation;
 - (c) ascertaining compliance with covenants under loan agreements;
 - (d) reviewing accounting treatment of unusual or non-recurring transactions;
 - (e) reviewing disclosure requirements for commitments and contingencies;
 - (f) reviewing adjustments raised by the external auditors, whether or not included in the financial statements;
 - (g) reviewing unresolved differences between management and the external auditors; and
 - (h) obtaining explanations of significant variances with comparative reporting periods.

- D. The Committee is to review the financial statements, prospectuses, MD&A, annual information forms and all public disclosure containing audited or unaudited financial information (including, without limitation, annual and interim press releases and any other press releases disclosing earnings or financial results) before release and prior to Board approval. The Committee must be satisfied that adequate procedures are in place for the review of the Corporation's disclosure of all other financial information.
- E. With respect to the appointment of external auditors by the Board, the Committee shall:
- (a) review and recommend to the Board, for shareholder approval, engagement of the external auditor including, as part of such review and recommendation, an evaluation of the external auditors qualifications, independence and performance;
 - (b) review and recommend to the Board the annual external audit plan, including but not limited to the following:
 - (i) engagement letter;
 - (ii) objectives and scope of the external audit work;
 - (iii) procedures for quarterly review of financial statements;
 - (iv) materiality limit;
 - (v) areas of audit risk;
 - (vi) staffing;
 - (vii) timetable; and
 - (viii) proposed fees;
 - (c) on an annual basis, review and discuss with the external auditors all significant relationships such auditors have with the Corporation to determine the auditors' independence;
 - (d) when there is to be a change in auditors, review the issues related to the change and the information to be included in the required notice to securities regulators of such change; and
 - (e) review and pre-approve any non-audit services to be provided to the Corporation or its subsidiaries by the external auditors and consider the impact on the independence of such auditors. The Committee may delegate to one or more independent members the authority to pre-approve non-audit services, provided that the member report to the Committee at the next scheduled meeting such pre-approval and the member comply with such other procedures as may be established by the Committee from time to time.
- F. Review and advise the Board with respect to the planning, conduct and reporting of the annual audit, including but not limited to:
- (a) any difficulties encountered, or restrictions imposed by management during the annual audit;
 - (b) any significant accounting or financial reporting issue including the resolution of any disagreement between management and the external auditors;
 - (c) the auditor's evaluation of the Corporation's system of internal controls, procedures and documentation;

- (d) the post audit or management letter containing any findings or recommendation of the external auditor, including management's response thereto and the subsequent follow-up to any identified internal control weakness; and
 - (e) assess the performance and consider the annual appointment of external auditors for recommendation to the Board.
- G. The Committee shall review risk management policies and procedures of the Corporation (e.g. hedging, litigation and insurance).
- H. The Committee shall review and receive assurances on the independence of the external auditor.
- I. The Committee shall review the non-audit services to be provided by the external auditor's firm and consider the impact on the independence of the external audit.
- J. The Committee shall establish a procedure for:
 - (a) the receipt, retention and treatment of complaints received by the Corporation regarding accounting, internal accounting controls or auditing matters; and
 - (b) the confidential, anonymous submission by employees of the Corporation of concerns regarding questionable accounting or auditing matters.
- K. The Committee shall review and be apprised of any intent of the Corporation regarding the hiring of partners and employees who work on the Corporation's account and former partners and employees of the present and former external auditors of the Corporation.
- L. The Committee shall have the authority to communicate directly with the internal auditors of the Corporation (if any) and the external auditors of the Corporation.
- M. The Committee shall have the authority to investigate any financial activity of the Corporation. All employees of the Corporation are to cooperate as requested by the Committee.
- N. The Committee may retain persons having special expertise and/or obtain independent professional advice to assist in fulfilling their responsibilities at the expense of the Corporation without any further approval of the Board.
- O. The Committee shall review material litigation and its impact on financial reporting.

IV. MEETINGS AND ADMINISTRATIVE MATTERS

- A. At all meetings of the Committee every motion shall be decided by a majority of the votes cast. In case of an equality of votes, the Chair of the meeting shall not be entitled to a second or casting vote.
- B. The Chair shall preside at all meetings of the Committee, unless the Chair is not present, in which case the members of the Committee present shall designate from among the members present the Chair for purposes of the meeting.
- C. A quorum for meetings of the Committee shall be a majority of its members, and the rules for calling, holding, conducting and adjourning meetings of the Committee shall be the same as those governing the Board unless otherwise determined by the Board.

- D. Meetings of the Committee should be scheduled to take place at least four times per year. Minutes of all meetings of the Committee shall be taken. The Chief Financial Officer shall attend meetings of the Committee, unless otherwise excused from all or part of any such meeting by the Chair.
- E. The Committee shall meet with the external auditor at least once per year (in connection with the preparation of the year end financial statements) and at such other times as the external auditor and the Committee consider appropriate. At each of these meetings, the Committee will have an "in-camera" session with the external auditors.
- F. The Corporation's auditors shall be advised of the names of the Committee members and, when appropriate, will receive notice of and be invited to attend meetings of the Committee and to be heard at those meetings on matters relating to the auditor's duties.
- G. Agendas, approved by the Chair, shall be circulated to Committee members along with background information on a timely basis prior to the Committee meetings.
- H. The Committee may invite such officers, directors and employees of the Corporation as it may see fit from time to time to attend at meetings of the Committee and assist thereat in the discussion and consideration of the matters being considered by the Committee.
- I. Minutes of the Committee will be recorded and maintained and circulated to Directors who are not members of the Committee or otherwise made available at a subsequent meeting of the Board.
- J. The Committee may retain persons having special expertise and/or obtain independent professional advice to assist in fulfilling its responsibilities at the expense of the Corporation.
- K. Any members of the Committee may be removed or replaced at any time by the Board and shall cease to be a member of the Committee as soon as such member ceases to be a Director. The Board may fill vacancies on the Committee by appointment from among its members. If and whenever a vacancy shall exist on the Committee, the remaining members may exercise all its powers so long as a quorum remains. Subject to the foregoing, following their appointment as a member of the Committee each member shall hold office until the Committee is reconstituted.
- L. Any issues arising from these meetings that bear on the relationship between the Board and management should be communicated to the Chair of the Board by the Committee Chair.

V. STANDARDS OF LIABILITY

Nothing contained in this Mandate and Terms of Reference is intended to expand applicable standards of liability under statutory, regulatory or other legal requirements for the Board or members of the Committee. The purposes and responsibilities outlined in this Mandate and Terms of Reference are meant to serve as guidelines rather than inflexible rules and the Committee may adopt such additional procedures and standards as it deems necessary from time to time to fulfill its responsibilities.

VI. REVIEW OF MANDATE AND TERMS OF REFERENCE

The Committee shall review and assess this Mandate and Terms of Reference annually and otherwise as it deems appropriate and recommend changes to the Board.

Dated: March 28, 2018
